ACKNOWLEDGMENTS—Many persons participated in the various activities of the 1977 Census of Transportation. Primary direction of the census program was performed by **Shirley Kallek**, Associate Director for Economic Fields, and **Richard B. Quanrud**, Assistant Director for Economic and Agriculture Censuses.

Since the 1977 National Travel Survey was based on a survey of households, overall direction and planning of the survey was provided in the Demographic Fields then under the supervision of **Daniel B. Levine**, Associate Director for Demographic Fields. This report was prepared in the Demographic Surveys Division under the general direction of **Earle J. Gerson**, Chief (to July 1978) and **Marvin M. Thompson**, his successor. **Thomas C. Walsh**, Assistant Chief for Consumer Surveys, was responsible for the overall planning and management of the 1977 National Travel Survey.

Planning and implementing this report was under the direction of **John C. Cannon**, Chief, Travel Surveys Branch, assisted by **Betty J. Buckner**. Computer programs were developed under the general supervision of **Barry M. Cohen**, Assistant Division Chief for Processing. **Kenneth D. Kaplan**, Chief, Special Projects and Surveys Programing Branch I, assisted by **Betty A. Dobronski** and **Reginald D. Masano**, was primarily responsible for planning and implementing the programs. Clerical and data input procedures were developed by **Leonard Goldberg**, Chief, Methods, Procedures, and Quality Control Branch, assisted by **David B. Lipscomb, John Riemenschneider**, and **John P. Truffa**.

Sample design, quality control, estimation procedures, and the estimates of reliability were under the direction of **Charles D. Jones**, Chief, Statistical Methods Division, with primary staff assistance by **Gary Shapiro, David Bateman**, and **Robert O'Reagan**, Assistant Chiefs. Staff assistance was provided by **Joan Kahn, Grant Capps, Charles Edwards, Florence Hochstadter, David Kriegman, Christine Jorgensen, George Train, Irwin Schreiner, Michael Tenebaum, Dennis Schwanz, Len Baer, David Diskin, John Linebarger, Gary Sparks, Henry Woltman, Larry P. Carstensen**, and **Irene Montie**.

Data collection activities were developed under the direction of **Forrest Cawley**, Chief, Field Division, assisted by **George Reiner, Darren Althouse, Ken Frail, William Phalen, Steve Mann**, and **Patricia Russell**. Additionally, assistance in carrying out the data collection activities was provided by the directors and staffs of the Bureau's Regional Offices.

Forms design was performed in the Administrative Services Division, **Henry J. Husmann**, Chief. The entire staff of the Forms and Mail Management Branch made significant contributions in the planning, design, review, and composition of the forms.

Within the Publications Services Division, many individuals made significant contributions in publication planning and design, editorial review, composition, and printing procurement. These operations were performed under the direction of **Raymond J. Koski**, Chief, assisted by **Milton S. Andersen, Gerald A. Mann, Wayne H. Massey, Helen M. Curtis, Jacqueline A. Gans, Charles C. Huntley, Nicholas Preftakes, Rosemary B. Vance**, and **Robert Warunek**.

Clerical and data keying operatons were performed in the Data Preparation Division at Jeffersonville, Ind., under the direction of **Don L. Adams**, Chief, assisted by **Robert L. Allen, Kurt Legait**, and **Patricia M. Clark**.

The geographic coding procedures and computer programs were developed in the Geography Divison under the direction of **Jacob Silver**, Chief, assisted by **Silla G. Tomasi, Gerald Cranford, Terence D. McDowell, Dan Harding, Phyllis Krause, Walter Yergen**, and **Rose J. A. Quarato**.

Computer processing was directed by **C. Thomas DiNenna**, Chief, Computer Services Division. **John E. Halterman, Jesse J. Verdeja, Willie E. Clark**, and **Norman W. Larsen** provided staff assistance.

Lawrence Cox, Statistical Research Division, and **Lawrence E. Cornish**, Systems Software Division, made significant contributions by developing special-purpose computer programs for disclosure analysis and publication preparations.

Donald E. Young, Lawrence H. Lyons, Robert S. Taylor, and **Dayton P. Jorgenson**, of the Office of the Assistant Director for Economic and Agriculture Censuses, participated in overall planning and review of the census operations.

Special acknowledgment is also due the U.S. Department of Transportation and U.S. Travel Service, U.S. Department of Commerce, which provided funds to help support this survey.

INTRODUCTION

HISTORY OF THE ECONOMIC CENSUSES

The economic censuses are comprehensive and periodic canvasses of the Nation's industrial and business activities. Taken by the Census Bureau, a part of the U.S. Department of Commerce, the censuses provide a detailed statistical profile of a large segment of the national economy.

The first economic census of the United States was conducted as part of the 1810 decennial census, when inquiries on manufacturing were included with the census of population. All other decennial censuses through 1900, except in 1830, contained questions on manufacturing. In 1904 the quinquennial census of manufacturing began. Although some distributive trade data were collected in the decennial census of 1840, the first census of business was taken in 1929. It covered only retail and wholesale trades, but beginning with the second business census in 1933 and in succeeding censuses various services also have been included. The censuses were taken at varying intervals until 1954, when an integrated economic census program was begun covering the retail and wholesale trades, selected service industries, manufactures, and minerals industries. The 1963 Economic Censuses were expanded to include transportation and commercial fisheries. Beginning with the 1967 censuses, Congress authorized the economic censuses to be taken at 5-year intervals covering years ending in "2" and "7."

USES OF THE ECONOMIC CENSUSES

The economic censuses are the primary source of facts about the structure and functioning of the economy and, therefore, provide information essential for both government and business. The censuses furnish an important part of the framework for such composite measures as the national accounts. In forecasting and planning, they are especially useful in analyzing the national product in terms of the transactions that determine its size and composition. The economic censuses also provide weights and benchmarks for indexes of industrial production, productivity, and price, all of which are essential for understanding current economic developments.

Manufacturers and distributors make widespread use of the economic censuses in establishing measures of their potential markets by areas, kinds of businesses, and kinds of products. Management in various industries and trades get facts from them for use in economic or sales forecasting, analyzing sales performance, laying out sales territories, allocating advertising budgets, and locating plants, warehouses, and stores. Trade organizations use census statistics for insight into changes in the structure of industry. State and local governments use the geographic detail that describes the patterns of economic change in individual communities.

Following every census, reports are purchased by thousands of businesses and other users; likewise, census facts are widely disseminated by trade associations, business journals, and the daily press. Volumes containing census statistics are available in most major public and college libraries.

AUTHORITY AND SCOPE OF THE ECONOMIC CENSUSES

The economic censuses are required by law under title 13 of the United States Code, sections 131, 191, and 224, which direct that they be taken at 5-year intervals. The 1977 Economic Censuses covered manufacturing, mining and quarrying, construction industries, retail trade, wholesale trade, service industries, and selected transportation activities. The next economic censuses are scheduled to be taken in 1983 covering the year 1982.

CENSUS OF TRANSPORTATION

Economic activity generated from travel of persons and from the transportation of goods represents one of the largest and most rapidly growing industrial sectors in the United States. In many areas of the country, travel-related services form the primary industries for providing income and jobs for many of its residents. In view of the importance of travel and transportation to the economic and social well-being of the country, comprehensive and timely data relating to this sector is essential to government, private industry, and others responsible for policy formation and promotional activities in the general field of travel.

The Census of Transportation is designed to meet some of these data needs by providing information on several aspects of travel and transportation.

The 1977 Census of Transportation consists of four surveys:
1. Truck Inventory and Use.
2. National Travel.
3. Commodity Transportation.
4. Nonregulated Motor Carriers and Public Warehousing.

These surveys were previously taken in 1963, 1967, and 1972.

NATIONAL TRAVEL SURVEY

Purpose

The 1977 National Travel Survey (NTS) was taken to provide statistical data on the volume and characteristics of nonlocal travel by the civilian noninstitutional population in 1977. For the survey, nonlocal travel was defined as any trip extending 100 miles or more from origin to destination. (See appendix A, for definitions of the terms used in this report.) Specifically excluded from the survey was (1) travel taken as part of an

operating crew on a train, plane, bus, truck, or ship, (2) commuting to a place of work, (3) travel by students between home and school, and (4) travel by the Armed Forces while on active duty.

The survey was based on a national probability sample of households selected from each of the 50 States and the District of Columbia. Interviews were conducted with the sample households to obtain information on the number of trips taken by members of the household and on certain trip-related characteristics. Selected social and economic characteristics of household members were also collected. The survey was planned and sponsored jointly by the U.S. Department of Transportation, the U.S. Travel Service, and the Bureau of the Census.

This report presents detailed statistics on the volume and characteristics of nonlocal travel taken during 1977 for the Nation as a whole, the 8 travel regions (see map), the 50 States and the District of Columbia, and selected destinations outside the United States. Data are provided on the number of trips taken, purpose of the trip, means of transportation, origin, destination, and several other trip-related characteristics. Estimates are shown for both the number of "trips" and "person-trips." A "trip" is a household trip; i.e., it is a trip of 100 miles or more from origin to destination, and the return, on which one or more members of a household traveled together. A "person-trip" is a trip taken by an individual. For example, if three persons from the same household went together on a trip, they would have taken one (household) trip and three person-trips. On the other hand, if one person took three different trips during the year, he or she would have taken three (household) trips and three person-trips.

In addition to the characteristics of trips taken during 1977, the report presents data on selected social and economic characteristics of the population including age, sex, race, education, occupation of household head, residence, and family income. Data are provided for both traveling and nontraveling households for comparison.

Survey Methodology

The report of the 1977 National Travel Survey is based on information obtained primarily by personal interview from a national probability sample of approximately 25,000 housing units representing the total civilian noninstitutional population of the United States. Each sample household was to be interviewed at approximately 3-month intervals over the survey period to develop a record of all trips taken by household members during 1977. The sample was divided into four panels of approximately equal size and geographic distribution. Households in all four panels were first interviewed in April 1977 to report any trips thay had taken since January 1, 1977. The first panel were visited again in May, August, November, and January 1978. The second panel was visited in June, September, and January 1978. The third and fourth panels were visited in July, October, and January 1978. This interview pattern was similar to that used in the 1972 NTS. It was employed to distribute as much as possible through the year any biases in reporting the month of a trip.

Interviewing Procedures

Interviewing was accomplished primarily through a personal visit with the household. Each member 14 years old or older was asked to report all the trips he or she took during the reference period. Household members not present at the time of the initial visit were later telephoned and asked to report their trips. Trips of persons under 14 years were reported by a knowledgeable adult member present at the time of the visit.

The 1977 NTS was based on a sample of households. Persons whose usual place of residence was located at the sample addresses during the April enumeration formed the basic sample of households interviewed in subsequent visits. If all members of the household moved to a new address within the United States during the survey period, efforts were made to interview the household at it's new address. When a change in household membership occurred after the initial interview (because of divorce, separation, or other such reasons), the household was considered the same if any of the original members still resided at the address and all persons living there were interviewed. The composition of all sample households was updated at each interview to add new members and drop ones no longer living in the household.

College dormitories and fraternity and sorority houses were a part of the sample of households. Students living in these units and other types of campus housing were counted as separate households, not as members of their parents' households (as is done in certain other sample surveys such as the Current Population Survey). Due to the high mobility of the college population, the sample of college housing units was treated differently than the other sample units in the survey. The addresses of college units remained in the sample throughout the survey. Students living there during the survey period were interviewed; students moving from these quarters were not followed. If this procedure had not been followed and the mover rules for the noncollege universe had been used instead, most of the college units would have been dropped from the sample during summer vacation when students move to other residences.

In all the interviews after the first one, the households were asked to report the trips taken since the last interview. A "bounding" technique was designed to prevent trips from being reported in a current reference period which actually had been taken and reported in a previous reference period. The technique was for the interviewer to record on a control card trips reported during previous interviews and to remind the respondent of those trips. Besides avoiding duplication in the reporting of trips, the control card helped recall trips.

Another device to assist respondents in recalling trips was a calendar with space to note the destination of any trips of 75 miles or more. It was given to each sample household during the first interview and its use and purpose explained. Notations made on the calendar aid were not relied upon completely as a record of all trips, but served merely to recall trips. The interviewer always probed further to make sure that the respondent reported each trip of 75 miles or more taken during the reference period.

Approximately 90 percent of the households at the occupied addresses in the sample were interviewed during the survey period and reported their travel throughout 1977. Included among them were a few households in which the occupants were not interviewed during one of the schedule visits but were interviewed at the subsequent 3-month visit. Those households were asked to report trips in the last 6 months even though that lengthened the recall period.

Mileage Estimation

The measurement of trip mileage in the travel survey is an important factor for at least two reasons: (1) To get an estimate of total miles traveled from origin to destination and return and (2) to determine whether the distance traveled was sufficient to meet the criterion of a trip established for the survey (in this case, 100 miles from origin to destination). For the NTS, the method of calculating the mileage on a trip was first to determine the straight-line distance between the origin and the destination, and then to adjust that figure to account for the circuitous nature of the actual routes traveled and for possible side-trips.

Since the 1963 NTS, a computerized system has been used to calculate the straight-line distance between any two points in the United States. This Place Identification, Characteristics and Area, Direction and Distance (PICADAD) system is considered a more accurate method of determining distance than relying on the traveler's figures. The PICADAD file contains the longitude and latitude of each place, which is used to determine the arc distance between one place and another. Using this information, a trip's straight-line distance in miles between origin and destination was computed.

The PICADAD file used for the 1977 NTS consisted of approximately 20,000 key points—about four times as many points as in the PICADAD file used for the 1972 NTS. There was a key point for all incorporated places, unincorporated places of 25,000 inhabitants or more, towns in New England States, townships of 10,000 inhabitants or more in Pennsylvania and New Jersey, and population centers in every State and county or county equivalent. The 1977 PICADAD file also contained approximately 25,000 additional records on alternate names and variant spellings of key points. For example, an alternate name for Washington, D.C., is Georgetown, D.C.; a variant spelling of Washington, D.C., is Wash., D.C. These alternate names and variant spelling were important because place names, in whatever form, were data keyed from the questionnaire and the file produced was matched alphabetically to the PICADAD file to compute the straight-line distance between a trip's origin and destination. Unmatched cases were clerically reviewed and resolved.

As was mentioned earlier, the straight-line mileage was adjusted to determine the actual route miles of a trip. One adjustment is known as the "circuity" factor. Highways, roads, train tracks, and airline routes are not straight but circuitous. Straight-line mileage must be adjusted to reflect this fact. A 1.25 circuity factor was applied to all train and bus trips and a 1.15 factor to all airplane trips. Automobile and truck trips were assigned a factor based on the State of origin and the State of destination of each trip. These factors ranged from 1.01 (Maryland to Virginia) to 1.81 (Montana to Idaho).

In addition to the circuity factor, a "side-trip" factor of 1.25 was applied to all automobile and truck trips to compensate for the general tendency of travelers to take side trips and to travel along the most interesting or fastest routes rather than the shortest.

After applying the circuity and side-trip factors to the straight-line mileage for automobile and truck trips, the resulting mileage was multiplied by 0.86, reducing the estimate of trip mileage. This final adjustment was made based on the results of a study on mileage estimation. The study compared the length of trips reported by respondents with an estimate of the mileage that did not include the 0.86 factor. The study used information on actual routes and side trips collected from a representative sample of the trips reported in the survey. (For more explanation of the mileage estimation process and how it differed from that used in previous surveys, see Comparison With Previous National Travel Surveys.)

Sample Design

The estimates in this report are obtained from data collected from interviews conducted between April 1977 and January 1978 for the National Travel Survey. The survey was designed to estimate personal and household travel characteristics for trips of 100 miles or more one-way. The NTS sample was approximately 25,000 households. Of these, 1,471 households were not interviewed because the occupants were not at home after repeated calls, refused to participate in the survey, or were unavailable for some other reason. In addition, 3,464 units were found to be vacant, demolished, converted to nonresidential use, or otherwise ineligible for the survey.

Approximately 18,000 of the 25,000 sample units consisted of households that had previously been interviewed for the Current Population Survey (CPS). Approximately 14,000 of these units comprised a representative national probability sample. The remaining 4,000 units also comprise a probability sample; however, they were selected in specific areas of the country to increase the reliability of trip data for certain States. The remaining 7,000 units were currently being interviewed for the Quarterly Housing Survey (QHS). For them, the NTS was conducted as a supplement to their QHS interview.

The CPS is a stratified multistage cluster sample. In the first stage, the United States was divided into primary sampling units (PSU's) consisting of counties, groups of counties, or independent cities. Approximately 1,930 PSU's were formed and grouped into 376 strata. Among these strata, 156 consisted of a single PSU and thus came into the sample with certainty. These strata, designated self-representing (SR) areas, generally contained the larger metropolitan areas. The remaining 220 were formed by combining PSU's that possessed similar characteristics, such as geographic region, population density, population growth rate, and proportion of non-White population. From each stratum, one PSU was selected for the sample with a probability proportionate to its 1970 census population. These PSU's are referred to as non-self-representing (NSR).

The CPS portion of the NTS was selected from these 376 PSU's (156 SR + 220 NSR).

Within the sample PSU's, a sample of housing units enumerated in the 1970 Census of Population was selected for the CPS in several stages. The first step was the selection of a sample of census enumeration districts (ED's)—administrative units used in the 1970 Census. The probability of selection of an ED was proportionate to its 1970 population.

The next step was to select an expected cluster of about four neighboring housing units within each sample ED. Most clusters were selected from the list of addresses for the ED compiled in the 1970 census. However, in those ED's where addresses were incomplete or inadequate (mostly rural areas), the selection process was accomplished using area sampling methods. These ED's were divided into small land areas with well-defined boundaries, having an expected size of four, or a multiple of four, housing units. Those segments with an expected size of a multiple of four were further subsampled at the time of enumeration so that an expected four housing units were chosen for interview.

In addition, a sample of new construction units was selected from building permits issued since January 1970. Within each sample PSU, the building permits were chronologically ordered by month issued, and compact clusters of approximately four housing units were created. These clusters were then sampled using the appropriate sampling rate. Housing units constructed since the 1970 census in areas which do not issue building permits were brought into the sample as a result of the area sample described above.

Since the NTS sample consists of households previously interviewed for CPS, additional updating was done to represent units built since the time of the CPS. However, this updating was only done in permit issuing areas. New construction from nonpermit issuing areas was not represented for about 2 1/2 to 3 years for the 4,000 extra units chosen to increase reliability of trip data for certain States and for 1 1/2 years for the remaining CPS sample.

The QHS portion of the NTS is also a stratified multistage cluster sample consisting of 103 PSU's, of which 24 are SR for the QHS and also for the CPS. The remaining 132 PSU's which are SR in the CPS were collapsed into 44 strata of approximately 3 PSU's each. One PSU was randomly selected from each of these strata to be in the QHS. The 220 NSR strata from the CPS were grouped into 110 pairs. The 110 pairs of NSR strata were grouped into 35 strata consisting of approximately 3 paired strata. One of three paired strata was chosen randomly and a PSU selected from it to be in the QHS. The remaining stages of selection are the same as those described previously for the CPS. However, since the sample from the QHS portion of the NTS consisted of households currently being interviewed for the QHS, additional updating for new construction was not needed.

Estimation Procedure

This report covers travel for the entire year and for each calendar quarter of 1977. To cover the NTS travel year, households and persons were interviewed four or five times during the survey period if possible. However, some households or persons became "noninterviews" after the first interview in April and remained noninterviews for the rest of the year. Also some persons could not be reinterviewed after the first time in April because they had moved out of the sample household After April and were not followed and interviewed for the rest of the year (see the NTS mover rules in Survey Methodology). In addition, some persons moved into a sample household between interviews and were interviewed only while they were part of the sample household. To include partial-year data in statistics which are calendar-year dependent (e.g., a household or person distribution of the number of trips taken during the whole year) would result in biased estimates for such statistics. Thus, rules for deciding when to include partial-year data for different statistics were developed for the annual estimation procedure.

The solution to this problem that would have produced the most reliable estimates for each major characteristic would have been to use the maximum amount of available data for each characteristic except that portion of partial-year data which would introduce bias for that characteristic. However, since the annual report contained quarterly as well as annual estimates of characteristics, rules for inclusion of the partial-year data that would not introduce bias, and weights for creating tabulations, would have had to be applied on a quarterly basis and by each of the major characteristics being estimated. A major and very important by-product of the NTS was a data users' tape containing the annual data records for each sample unit. The procedure described above was not adopted because it would have created a data users' tape extremely difficult to utilize properly considering the large number of weights associated with each data record that had to be employed to produce tabulations.

The solution actually adopted for the partial-year-data problem employed rules for inclusion of data which were designed for developing annual estimates of NTS characteristics. This meant that the resultant weights would be utilized to produce estimates for the year as well as for any subset of the year. In addition, two sets of rules were developed, one for producing estimates of trip and person characteristics and the other for producing estimates of household characteristics.

The rules for trip and person characteristics dictated that data would be included from a household (i.e., a household would be counted as an interview) only if it were interviewed for the entire year. Data from households not interviewed for the entire year were dropped, and such households were counted as noninterviews. Data from persons were included only if the persons had been members of households at the first interview and subsequently interviewed for the entire year. Data from persons who left a household after the first interview or who had not been reinterviewed for other reasons were dropped, and such persons were counted as noninterviews. Data from persons who moved into a household after the first interview were classified out-of-scope and also dropped. These rules resulted in 2,659 household noninterviews (12.3 percent of the eligible households) and 4,223 person noninterviews (7.7 percent of the eligible persons). Among the 2,659 household noninterviews, 1,188 (5.5 percent of the eligible households) were households not interviewed for part of the year and 1,471

(6.8 percent of the eligible households) were households not interviewed for the full year. Among the 4,223 persons noninterviews, 3,122 persons (5.7 percent of the eligible persons) were defined as noninterviews because they moved out of the household and 1,101 (2 percent of the eligible persons) because they were not interviewed for the full year. Data for 3,285 additional persons were dropped because they were not household members at the first interview.

The rules for household characteristics dictated that data should be included from a household (i.e., a household would be counted as an interview) only if it were interviewed for the entire year and if all persons, who were household members at the first interview, were interviewed for the entire year. Data for households that did not meet these criteria were dropped and such households were counted as noninterviews. Data from persons who moved into a household after the first interview were dropped. These rules resulted in 5,689 household noninterviews (26 percent of all eligible households). Among the 5,689 household noninterviews, 1,188 (5.5 percent of all eligible households) were households not interviewed for part of the year, 1,471 (6.8 percent of the eligible households) were households not interviewed for the full year, 1,068 (4.9 percent of the eligible households) were households in which persons were not interviewed for the full year, and 1,962 (9 percent of the eligible households) were households from which persons moved during the survey.

The actual estimation procedure for the 1977 NTS annual report was a complex, multistage ratio estimation procedure. Each NTS characteristic reported by CPS or QHS units was assigned a weight that constituted a product of some of the following components:

1. Basic weights
2. Household noninterview factor
3. Within-household noninterview factor
4. Sample ratio factor
5. Sample survey weights
6. First-stage ratio estimate factor
7. Second-stage ratio estimate factor
8. Third-stage ratio estimate factor

These components attempted to adjust for—

1. Household and within-household noninterviews in the NTS.
2. Additional data dropped because of data inclusion rules.
3. Merging of data from the CPS- and QHS-based samples.
4. Sampling of PSU's.
5. Household and within-household undercoverage in the NTS.
6. Known deficiencies in the NTS sample frame.

Basic weight—The first step in the estimation procedure was to inflate the sample data by the reciprocal of the probability of selection. This adjustment was known as the basic weight.

Household noninterview factor—Then an adjustment was made to account for household noninterviews. This adjustment was computed separately for different household characteristics and was equal to the following factor:

$$\frac{\text{Weighted estimate of interviewed households} + \text{Weighted estimate of noninterviewed households}}{\text{Weighted estimate of interviewed households}}$$

Because of the two sets of data-inclusion rules, the set of households defined as noninterviews for person/trip characteristics were different from the set of noninterviewed households for household characteristics. Thus, two different sets of household noninterview factors were actually calculated and applied, one for person/trip characteristics and another for household characteristics.

Within-household noninterview factor—A similar adjustment was made to account for person noninterviews in households in which at least one person was interviewed. This within-household noninterview adjustment was computed separately for different person characteristics. The number of person interviews within an interviewed household was usually not more than one. Trips involving more than one person from a household would have been reported even if they involved person noninterviews within an interviewed household. However, trips involving only a person noninterview in an interviewed household would not be reported. For these reasons, the within-household noninterview adjustments were only applied to person characteristics and to characteristics of trips involving only one person from a household. This adjustment was equal to the following factor:

$$\frac{\text{Weighted estimate of interviewed persons} + \text{Weighted estimate of noninterviewed persons in households in which at least one person was interviewed}}{\text{Weighted estimate of interviewed persons}}$$

Sample ratio factor—After the noninterview adjustments, the sample ratio factor component was applied because the data inclusion rules caused more data to be dropped than if the initial solution to the partial-year-data problem had been used. This component was calculated separately for several characteristics for each of the major statistics; it was equal to the following ratio:

$$\frac{\text{Weighted estimate of the characteristic based on the data-inclusion rules resulting from the initial solution}}{\text{Weighted estimate of the characteristic based on the data-inclusion rules actually used for the annual estimation}}$$

The numerators of these ratios were calculated by applying the initial data-inclusion rules to NTS data collected during the year and by weighting the data to be included under these rules to produce estimates for each of these characteristics. Application of these factors produced more reliable estimates for each of these characteristics as well as somewhat more reliable estimates for subsets of these characteristics.

Sample survey weights—After the noninterview adjustments and sample ratio factors were computed separately for CPS and QHS households, estimates from CPS and QHS households were combined at the State level. A component W_s, equal to the proportion of CPS units in the State sample, was applied to the

weight for each CPS unit, and a component 1 - W_s, equal to the proportion of QHS units in the State sample, was applied to the weight for each QHS unit. W_s and (1 - W_s) were known as the sample survey weights and were assumed to approximate the proportion of total variance for a State contributed by the CPS sample and QHS sample in the State.

Ratio estimation factors—Ordinarily, the distribution of the sample differs somewhat from the distribution of the total population from which the sample was drawn in age, race, sex, residence, etc. Because of this, various stages of ratio estimation were employed to bring the distribution in the sample into closer agreement with the distribution in the total population to reduce the variability of the sample estimates. Another reason for employing ratio estimates was the existence of known deficiencies in the NTS sample in the representation of conventional new construction in permit issuing areas, new construction mobile homes, and within-household coverage of persons (see Nonsampling error below).

Since the 1977 NTS produced estimates of travel to and through each State, ratio estimates were also computed and applied on the State level to produce more precise estimates for each State.

First stage—The first stage of ratio estimation was applied to households, persons, or trip characteristics from NSR CPS or QHS PSU's and CPS PSU's which were SR but part of an NSR stratum in the QHS. Its purpose was to reduce the sampling variability resulting from the selection of NSR PSU's from a State. This adjustment was especially important since many CPS and QHS NSR strata contain PSU's from more than one State. Thus for any given sample, large over- and under-estimates could result for certain States if the adjustment were not applied. For various categories of race and residence, the first-stage ratio estimation factor was:

$$\frac{\text{1970 census population counts for all NSR strata in a State}}{\text{Estimates of the population using 1970 census counts for sample NSR PSU's in a State}}$$

The numerators of the ratios were calculated by obtaining the 1970 census population counts for each of the race-residence categories and summing them across the NSR CPS or QHS strata in each State. The denominators were calculated by obtaining the 1970 census population counts for each of the race-residence categories for each NSR CPS or QHS sample PSU in a State, weighting these counts by the inverse of the probability of selecting that PSU, and summing these weighted counts across the NSR sample PSU's in each State. The computed first-stage ratio estimation factor was then applied to the existing weight for each NSR CPS or QHS sample unit, or each SR CPS unit which was part of a NSR QHS stratum, in each first stage ratio estimation category.

Second stage—The second stage of ratio estimation was employed for estimates of household characteristics and household-trip characteristics for trips involving more than one person from a household and included both a State and national adjustment. The State adjustment ratio estimated NTS sample estimates of households to independent current household estimates for States or groups of States; the national adjustment ratio estimated NTS sample estimates of households to independent current household estimates for 12 residence—race—sex-of-head categories. Its purpose was to reduce variability and correct for household coverage problems at the State and national levels (see Nonsampling errors). Because the data inclusion rules defined interviews and noninterviews for household characteristics differently than for household-trip characteristics, the second stage factors on both the State and national levels for household characteristics were different from the second stage factors for household-trip characteristics.

Third stage—The third stage of ratio estimation was applied to characteristics of persons, household-trips for trips involving only one person from a household, person-trips, person-miles, and person-nights. It also included both a State and national adjustment. It was designed to bring the distribution of sample persons from the NTS into closer agreement with independent post-census estimates of the distribution of the population by States and by various age-sex-race categories at the national level. Its purpose was to reduce variability and correct for both household and within-household coverage problems at the State and national levels. Household-trips for trips involving only one person from a household received a third-stage factor instead of a second-stage factor because these characteristics would be affected by both household and within-household coverage problems. Both the second and third stages of ratio estimation were repeated in an iterative procedure to bring the NTS estimates into close agreement with both State and national independent estimates.

Reliability of the Estimates

Sampling Errors

The particular sample used for this survey is one of a large number of possible samples of the same size that could have been selected using the same sample design. Estimates derived from the different samples would differ from each other. The variability between estimates from all possible samples is defined as the sampling error. A common measure of this sampling error is the standard error which measures the precision with which an estimate from a sample approximates the average result of all possible samples.

The standard error also partially reflects the variation in the estimates due to some nonsampling errors but it does not measure any systematic biases. Therefore, the accuracy of the estimates depends on both the sampling and nonsampling errors measured by the standard error and biases and some additional nonsampling errors not measured by the standard error.

The sample estimate and its estimated standard error enable one to construct interval estimates with prescribed confidence that the interval includes the average result of all possible samples. If all possible samples were selected and surveyed under

essentially the same conditions, and an estimate and its estimated standard error were calculated from each sample, then:

1. About 68 percent of the intervals from one standard error below the estimate, to one standard error above the estimate, would include the average result of all possible samples;
2. About 90 percent of the intervals from 1.6 standard errors below the estimate to 1.6 standard errors above the estimate would include the average result of all possible samples;
3. About 95 percent of the intervals from two standard errors below the estimate to two standard errors above the estimate would include the average result of all possible samples.

The average of all possible samples either is or is not contained in any specific computed interval. However, for a specific sample one can say with specified confidence that the average of all possible samples is included in the computed interval.

The figures presented in the tables below are approximations to the standard errors of various estimates shown in this report. To derive standard errors that would be applicable to a wide variety of items and also could be prepared at a moderate cost, a number of approximations were required. Thus the standard error tables provide an indication of the order of magnitude of the standard errors rather than the precise standard error for any specific item.

In general, the approximations to the actual standard errors were more precise for household and person characteristics than for household trip, person-trip, person-night and person-mile characteristics on the national, regional, and State levels. The quality of the approximation to the variances declined for regional characteristics and declined considerably more for State characteristics. Thus, for the regional and State characteristics the actual standard errors may vary a great deal in either direction from the approximated standard errors given in a table.

Table A presents the standard errors applicable to estimates of characteristics for households and persons for the year 1977 and for each quarter. Table B1—table E2 present the standard errors applicable to estimates of household trips, person-trips, person-nights, and person-miles separately for the year and quarters of 1977. Table F1—table F5 present the standard errors applicable to State estimates of characteristics.

10,000	-	-	1,869	1,579	1,789
25,000	-	-	-	3,897	4,339
50,000	-	-	-	-	8,570

The reliability of an estimated percentage depends upon the size of the percentage and the size of the total upon which the percentage is based. Estimated percentages are relatively more reliable than the corresponding estimates of the numerators of the percentages, particularly if the percentages are 50 percent or more. An approximation to the standard error of a percentage may be obtained by using the following formula or tables G1, G2, H1, H2, J1,and J2.

Let x = the numerator

y = the denominator

σ_x = the standard error of the numerator

σ_y = the standard error of the denominator

The standard error of the percentage (i.e. 100 (x/y)) is approximately equal to:

$$100\left(\frac{x}{y}\right)\sqrt{\left(\frac{\sigma_x}{x}\right)^2-\left(\frac{\sigma_y}{y}\right)^2}$$

The standard errors of x and y should be obtained from tables A—F5. For ratios, where x is not a subclass of y, the above formula underestimates the standard error of the ratio when there is little or no correlation between x and y. For this type of ratio, a better approximation of the standard error may be obtained by changing the sign in the formula from minus (-) to plus (+).

Table G1 presents the standard errors applicable to estimated percentages of person-trips, excluding area and travel region items, for the quarters of 1977. Table G2 presents factors to be applied to table G1 in order to produce standard errors applicable to estimated percentages of households, persons, and household trips for the year and quarters of 1977, of person-trips for the year 1977, and of person-trips pertaining to area and travel region items, for the quarters of 1977. Table H1 presents the standard errors applicable to estimated percentages of person-nights, excluding area and travel region items, for the year 1977. Table H2 presents factors to be applied to table H1 in order to produce standard errors applicable to estimated percentages of person-nights for the quarters of 1977 and of area and travel region items for the year 1977. Table J1 presents the standard errors applicable to estimated percentages of person-miles, excluding area and travel region items, for the year 1977. Table J2 presents factors to be applied to table J1 in order to produce standard errors applicable to estimated percentages of person-miles for the quarters of 1977 and for area and travel region items for the year 1977. Two-way interpolation should be used to determine standard errors for estimated percentages not specifically shown in these tables.

[1]Region of origin, residence, or destination.
[2]Area of destination or residence.

Included in tables A—J2 are estimates of standard errors for estimates of zero and 0 percent. These estimates are considered to be overestimates of the true standard errors and should be used primarily for construction of confidence intervals for characteristics when an estimate of zero is obtained.

Illustration of the use of the standard error tables—Table 2A of this report shows that in the United States there were 312,532,000 total household trips for the year 1977. Interpolation in table B1 of this appendix shows that the standard error on an estimate of this size is approximately 7,178,000. Consequently, the 68-percent confidence interval as shown by these data is from 305,354,000 to 319,710,000 household trips. Therefore, a conclusion that the average estimate, derived from all possible samples, of total household trips for the year 1977 lies within a range computed in this way would be correct for roughly 68 percent of all possible samples. Similarly, we could conclude that the average estimate derived from all possible samples, lies within the interval from 301,047,000 to 324,017,000 household trips with 90 percent confidence and that the average estimate lies within the interval from 298,176,000 to 326,888,000 household trips with 95 percent confidence.

Table 2A also shows that of the 312,532,000 total household trips for the year 1977, 222,289,000, or 71.1 percent, were taken using an auto/truck without camping equipment. Interpolation in table G1 (i.e., interpolation on both the base and percent) and applying the factor for household trips given in table G2 shows that the standard error of 71.1 percent is approximately .3 (i.e., .5 x .6808) percentage points.

Consequently, the 68-percent confidence interval as shown by these data is from 70.8 to 71.4 percent; the 90-percent confidence interval is from 70.6 to 71.6 percent; and the 95-percent confidence interval is from 70.5 to 71.7 percent.

Differences—The standard errors shown are not directly applicable to differences between two sample estimates. The standard error of a difference between estimates is approximately equal to the square root of the sum of the squares of the standard errors of each estimate considered separately. This formula is quite accurate for the difference between estimates of the same characteristic in two different areas or the difference between separate and uncorrelated characteristics in the same area. If, however, there is a high positive correlation between the two characteristics, the formula will overestimate the true error. Also, if there is a high negative correlation between two characteristics the formula will underestimate the true error.

Illustration of the computation of the standard error of a difference—Table 2A of this report shows that in the United States there were 52,177,000 household trips taken using an airplane. Thus, the apparent difference between the number of household trips by auto/truck without camping equipment and the number by airplane is 170,112,000. Table B1 shows the standard error on an estimate of 52,177,000 to be approximately 1,550,000 and the standard error of an estimate of 222,289,000 to be approximately 5,243,000. Therefore, the standard error of the estimated difference 170,112,000 is about

$$5{,}467{,}000 = \sqrt{(1{,}550{,}000)^2 + (5{,}243{,}000)^2}$$

Consequently, the 68-percent confidence interval for the 170,112,000 difference is from 164,645,000 to 175,579,000 household trips. Therefore, a conclusion that the average estimate of this difference, derived from all possible samples, lies within a range computed in this way would be correct for roughly 68 percent of all possible samples. Similarly, the 95-percent confidence interval is from 159,178,000 to 181,046,000 household trips, and thus we can conclude with 95 percent confidence that the number of household trips by auto/truck without camping equipment was different from the number of household trips by airplane.

Medians—For medians presented in certain tables, the sampling error depends on the size of the base and on the distribution upon which the median is based. An approximate method for measuring the reliability of the estimated median is to determine an interval about the estimated median such that there is a stated degree of confidence that the average median from all possible samples lies within the interval. The following procedure may be used to estimate confidence limits of a median based on sample data:

1. From tables G1, G2, H1, H2, J1 and J2 determine the standard error of a 50-percent characteristic on the base of the median;
2. Add to and subtract from 50 percent, the standard error determined in step 1; and
3. Using the distribution of the characteristic, read off the confidence interval corresponding to the two points established in step 2.

For about 68 out of 100 possible samples, the average median from all possible samples would lie between these two values.

A two-standard error confidence interval may be determined by finding the values corresponding to 50 percent plus and minus twice the standard error determined in step 1. For about 95 out of 100 possible samples, the average median from all possible samples would lie between these two values.

Illustration of the computation of the 95-percent confidence interval of a median—Table 2A of this report shows the median round trip distance for 302,169,000 household trips is 392 miles. Since distances were not calculated for trips with destinations outside the United States, this median round trip distance is not based on the total number of household trips.

1. Interpolation in table G1 and applying the factor for household trips given in table G2 shows that the standard error of 50 percent on a base of 302,169,000 is approximately .3 (.5 x .6808) percentage points.
2. To obtain a 95-percent confidence interval on the estimated median, initially add to and subtract from 50 percent twice the standard error determined in step 1. This yields percentage limits of 49.4 and 50.6.
3. From table 2A, it can be seen from the first category that 104,380,000 household trips, or 34.5 percent, had a round trip distance of less than 300 miles and that an additional 50,362,000 household trips, or 16.7 percent, had a round trip distance of 300 to 399 miles.

By linear interpolation, the lower limit of the 95-percent interval is found to be about:

$$\underline{299} + (\underline{400} - \underline{300}) \times \left(\frac{49.4 - 34.5}{16.7}\right) = 388$$

Similarly, the upper limit of the 95-percent confidence interval is found to be about:

$$299 + (\underline{400} - \underline{300}) \times \left(\frac{50.6 - 34.5}{16.7}\right) = 395$$

Thus, the 95-percent confidence interval ranges from 388 to 395 miles.

Illustration of the computation of the standard error of a mean—To get a rough estimate of the standard error of a mean, the following formula can be used.

$$\sqrt{\left[\frac{\sum_{i=1}^{c} p_i x_i^2 - \left(\sum_{i=1}^{c} p_i x_i\right)^2}{y}\right]} \cdot d$$

where p_i is the fraction of total cases in the i^{th} class.

x_i is the midpoint of the i^{th} class, with the midpoint of the open-ended class taken to be 3/2 times its lower limit;

y is the base of the distribution;

and d is a constant which depends on the sample size, the sample design and the estimation procedure. The values of d for different types of characteristics are provided in table K.

For the distribution used in the preceding example for medians, the mean trip distance is 747. From the distribution in table 2A, we can calculate

$$\sum_{i=1}^{c} p_i x_i^2 - \left(\sum_{i=1}^{c} p_i x_i\right)^2 \text{ to be}$$

approximately 638,451. The base is 302,169,000 and the factor d from table K is 22,231. Completing the calculations, the standard error is approximately 7 miles.

Table K. "d" Values for Estimates of Standard Errors of Means

Nonsampling errors

In addition to sampling errors, the estimates in this report are subject to nonsampling errors. In general, nonsampling errors can be attributed to many sources: Inability to obtain information about all cases, definitional difficulties, differences in the interpretation of questions, inability or unwillingness to provide correct information on the part of respondents, mistakes in recording or coding the data, and other errors of collection, response, processing, coverage, and estimation for missing data.

A major source of such errors for NTS results from the inability of respondents to accurately recall all the trips they had taken 3 months prior to the time of interview. From the questionnaire, it was impossible to determine whether a respondent did not report all the trips taken for a particular reporting period. Thus it was assumed for the basis of deriving estimates for the survey that the data reported by an interviewed household was complete, particularly regarding the number of trips reported. To assist respondents in recalling their trips, a calendar was given to the sample household with space provided to note any trips that members of the household took.

An additional problem involved telescoping, or bringing within the appropriate 3-month period, trips which actually occurred earlier. At the first interview, households were to report only trips taken since January 1, 1977, and during subsequent visits trips taken since the previous interview. Thus, the New Year may have had a bounding effect on the respondent's memory for the first interview. In subsequent interviews, information on previously reported trips was available to the interviewer for use in detecting the reporting of any trips previously reported, thus reducing the effects of telescoping. Internal telescoping of trips within any particular 3-month reference period may still exist.

Another source of nonsampling error was due to noninterviews encountered in NTS, including the additional noninterviews created as part of the NTS estimation procedure for households or persons with only partial year data. In adjusting for noninterviewed persons or households in the NTS procedure, it was assumed that the response of interviewed and noninterviewed persons or households in the same noninterview adjustment category are similar. The extent to which this assumption is invalid will add bias to the NTS estimates. Because of the additional noninterviews created for households or persons with only partial year data, the NTS estimates are probably subject to more bias than if the data had been used. Use of the sample ratio factors in the NTS estimation procedure attempted to adjust for this additional bias.

Additional nonsampling errors arise for noninterviewed persons in interviewed households. In adjusting for these persons, it was assumed that trips involving more than one person from a household would have been reported even if they involved a noninterviewed person within an interviewed household. As a result, for estimates of household trips the within household noninterview factors were only applied to trips involving one member of a household. Thus, household trips involving two or more people who were noninterviews in an interviewed household would not be represented as two or more person-trips if their trips did not include other interviewed persons in the household. This situation of more than one noninterviewed person could have been a problem, since the average number of noninterviewed persons per interviewed household with noninterviews was 1.39.

The computer method of estimating trip mileage was another source of nonsampling error. A test was performed which indicated that the method used in previous travel surveys with the adjustments for circuity and side trips was a fairly inaccurate method of estimating trip mileage compared with clerically estimating trip mileage. Estimates of trip characteristics were to include only trips for which round trip distance was 200 miles or more. However, these estimates may actually include some trips which are less than 200 miles round trip distance, as a result of the method used to estimate mileage. For the estimates presented in this report, an average adjustment factor of .86, based on the test results, was applied to the estimates of mileage in order to minimize gross errors of overincluding or underincluding trips close to the 200-mile cutoff. This should produce improved estimates of the number of trips.

With respect to errors of coverage and estimation for missing data, it was mentioned previously (in the section on estimation) that the NTS new construction sample had deficiencies with regard to the representation of both conventional new construction and new construction mobile homes in permit-issuing areas. During the sampling of building permits, only those issued since January 1, 1970, were eligible to be sampled to represent conventional new construction in permit-issuing areas. It had been assumed that units with permits issued prior to 1970 would have been completed by the time of the 1970 census (i.e., April 1970), and therefore would have been represented in the sample selected from 1970 census units. However, it has been estimated that the 1977 NTS sample missed about 5 percent (i.e., about 600,000 units) of all conventional new construction (i.e., all conventional housing units built after April 1970, in both permit-issuing and nonpermit-issuing areas) because the permits for these missed units, were issued before 1970.[1] In addition, the new construction updating of the NTS sample from CPS only included permits issued through September 1976. As a result, it is estimated that the 1977 NTS sample missed about 3 percent (about 300,000) of all conventional new construction because the permits for these units, which were built before April 1977, were issued after September 1976.[1]

Unlike the procedure for conventional new construction, there is no sampling procedure specifically for new construction mobile homes. However, new mobile homes in segments where area sampling methods were used do come into the NTS sample. In addition, new mobile homes in segments sampled from the 1970 census list also come into the sample if the mobile homes are located in mobile home parks, identified as such in the 1970 census. However, new mobile homes in those segments that are located in mobile home parks not in existence at the time of the 1970 census and for which area sampling methods are not used, have no chance of coming into the NTS sample. It has been estimated that the 1977 NTS sample missed at least 170,000 new mobile homes.[1]

[1] These problems are present in other sample surveys utilizing the same frame.

It is also felt that deficiencies exist in ED's where area sampling methods are used. It has been assumed that all units located inside these ED's would be represented in the sample. However, it has been estimated that the 1977 NTS sample missed as much as 2 percent (i.e., as much as 400,000 units) of all housing units in ED's where area sampling methods were used because these units were not listed during the canvassing.[1]

As previously mentioned (in the section on sample design) no updating was done for new construction in nonpermit-issuing area segments. Even though the number of units that would be picked up by updating in area segments was estimated to be quite small, this still introduces another source of error in the data with respect to coverage. The second- and third-stage ratio estimates were employed to reduce the effect of these household coverage deficiencies, although some bias in the NTS sample estimates may still exist.

The NTS sample also had deficiencies with respect to the within household coverage of persons. This occurred whenever the household respondent failed to account for all persons residing in the household at the time of interview. The third-stage ratio estimate was employed to reduce the effect of these deficiencies, although some bias in the NTS sample estimates may still exist.

With respect to errors associated with processing, the rounding of estimates introduces another source of error in the data, the severity of which depends on the statistic being measured. The effect of rounding is significant relative to the sampling error only for small percentages. This means that confidence intervals formed from the standard errors may be distorted, and this should be taken into account when considering the results of this survey.

Comparison With Previous National Travel Surveys—Details

National Travel Surveys have been conducted as part of the 1963, 1967, 1972, and 1977 Censuses of Transportation. The 1963 survey involved approximately 6,000 sample households, which were interviewed by personal visit at quarterly intervals about the trips they took in 1963. In 1967 questionnaires were mailed to a sample of 12,000 and in 1972 to 24,000 households at approximately quarterly intervals to obtain data on trips taken during those years. Telephone interviews or personal visits were made only to clarify certain information reported or to followup nonresponses to the mail inquiry.

Data Collection by Personal Visit

In 1977 the method of data collection significantly changed from the method used in the previous two surveys: The initial contact with the sample household in each interview period was made by personal visit rather than by mail. Household members not available then were interviewed later by telephone. The impact of this change in the way data were collected is impossible to measure, but tests conducted prior to the 1977 survey clearly indicated that the personal visit interview technique elicited the reporting of more trips and more accurate and complete information about the trips reported. The difference between the mail and personal interview technique appeared to be concentrated in the reporting of more short distance auto trips (100 to 150 miles one-way) taken for nonbusiness purposes.

Trips of 100 Miles or More

Another methodological change in the 1977 survey was in the technique used to report trips of 100 miles or more. For the 1963 and 1967 surveys, a respondent was to report as a trip "each time a person goes to a place at least 100 miles away from home or is out-of-town 1 or more nights." For the 1972 survey, the definition of a trip was changed to "each time a person goes to a place at least 100 miles away from home and returns," thus omitting all travel under 100 miles whether or not 1 or more nights were spent away from home. There were two principal reasons for changing the trip definition in 1972: (1) The basic intention of the survey was to measure nonlocal travel and a 100-mile trip is generally considered to be significant and nonlocal travel, and (2) earlier research revealed that shorter overnight travel was difficult for a respondent to recall over a 3-month period.

The 1977 survey used the 1972 trip definition although the technique for collecting trip information was modified. Respondents were asked to report all trips of 75 miles or more (one-way) in an attempt to minimize their failure to report trips of 100 miles or more through misconception of the actual distances traveled. Later, in the analysis phase of the NTS, trips calculated by the computer to be less than 100 miles were excluded.

Circuity Factor

Another important revision in the 1977 survey was a refinement in the adjustment factor used to convert "straight line miles" to "route miles" for a trip. The 1963 and 1967 surveys reported distances traveled in one-way, straight-line miles. The 1972 and 1977 surveys reported in route miles. "Route miles" are round-trip, straight-line miles adjusted upward for the general circuitious nature of the routes traveled and are considered a more accurate measure of actual miles traveled on a trip.

In 1972, a standard upward circuity factor was applied to all trips taken by a particular means of transportation. Automobile, truck, bus, and train trips were assigned a 25-percent circuity factor, and airplane trips were assigned a 15-percent circuity factor. Research on automobile and truck trips prior to the 1977 survey produced separate circuity factors for trips taken by these means between any two particular States, as well as for trips taken entirely within a State. The State-by-State factors are expected to provide a more accurate estimate of the actual distance traveled on a particular trip than the standard factor used in previous surveys. The circuity factors for other means of travel were not revised for the 1977 survey.

In addition to the circuity factor, in 1972 the estimates of automobile and truck straight-line mileage were adjusted upward 25 percent to account for a general tendency in travelers to take "side trips" and to travel along the most

[1] These problems are present in other sample surveys utilizing the same frame.

interesting or fastest routes rather than the shortest ones. In 1977 after applying the circuity and the side-trip factors, the resulting route miles for a trip were reduced 14 percent. This adjustment was based on the results of a study conducted in conjunction with the survey which clerically measured the length of trips using actual route and side-trip information supplied by respondents. The study was based on a representative sample of the trips reported in the first and fourth quarters of the survey.

Calendar Year Comparison

A comparison was also made of the relative distribution of trips by calendar quarter reported in the 1977 and 1972 surveys. The comparison showed that proportionally more trips were reported in the first quarter of 1977 than in the first quarter of 1972, but the converse was true in the third and fourth quarters:

Quarter	1977	1972	Difference
First	24.7	21.8	+ 2.9
Second	25.8	25.5	+ .3
Third	28.7	30.4	- 1.7
Fourth	20.8	22.4	- 1.6
	100%	100%	—

One possible reason for this difference between the 1977 and 1972 surveys concerns the number of business and convention trips reported in the two years. In 1972, such trips remained relatively constant throughout the year, ranging only from a high of 19.7 million trips in the second quarter to a low of 17.9 million trips in the third quarter. In 1977, business and convention trips steadily declined throughout the year from 25.7 million in the first quarter to 18.6 million in the fourth quarter. 1977 trips for some other purposes also declined in the fourth quarter, but business and convention trips showed the most pronounced decline.

The differences in the relative distribution of trips by quarter between the two survey years could have several explanations. One is that the estimates from both surveys accurately reflect the travel experiences for 1972 and 1977, and that business and convention travel did decline during the latter part of 1977. Another possible explanation is that respondents' reports of trips deteriorated in completeness over the year. A deterioration in the quality of information reported over several interviews with the same household is a fairly common occurrence among surveys of this type, although the extent to which this occurs varies substantially among surveys. Conceivably, such deterioration occurred to some unmeasurable amount in the 1977 NTS. (See Reliability of Estimates for other such possible "nonsampling errors").

More Trip Data Collected in 1977

The amount of trip-related information obtained in the 1977 survey dramatically increased in comparison with previous surveys. In addition to 1972 subjects, the 1977 survey collected information on activities engaged in while on a trip, use of a rental car, States passed through without spending a night, whether expenses were part of a package or all-expense tour, cost of the package trip, cost of transportation (if a common carrier was used), cost of lodging, extent of prior planning for vacation or weekend trips, and use of a travel agent. Furthermore, the information requested on purpose of trip, means of transportation, and type of lodging were expanded or modified. Two categories, "shopping" and "medical," were added to the question on main purpose of trip. In major means of transportation, "automobile (without camping equipment)" and "truck (without camping equipment)" were listed separately (in some but not all tables). The type of lodging categories were modified to provide additional information on the use of camping and vacation home facilities.

Information on certain household and traveler characteristics was added or modified for 1977: The number of categories relating to family income, occupation of household head, and residential dwelling ownership were expanded, questions were added on industry of household head and ethnic origin, and information was added on household composition and composition of household travel party.

Other information on household and traveler characteristics was modified for 1977: Area of residence, and destination (size of SMSA was substituted for central city/balance of SMSA), size of household, and number of members on trip.

Finally, the 1977 report was expanded to include information on travel to and through each of the 50 States and the District of Columbia as well as travel to selected destinations outside the United States. The report also includes data, shown separately, on travel during each of the four calendar quarters of 1977.

SUMMARY OF FINDINGS

During 1977, about 72 percent of the households in the United States took one or more trips. These households generated a total of 312.5 million trips, representing an average of 5.8 trips per traveling household. The average trip consisted of 1.7 household members, who spent an average of 4 nights away from home and traveled an average of 747 miles roundtrip.

One hundred and thirty-six million persons, or 64 percent of the total civilian noninstitutional population, traveled during the year, resulting in a total of 539 million person-trips. Among the traveling population, a traveler took an average of 4 trips, spending 15.9 nights away from home and traveling 2,812 miles during 1977.

TRIP CHARACTERISTICS

Major means of transportation and main purpose of trip—The automobile and truck was used for 76 percent of the total trips taken, commercial airplanes for 17 percent of the trips, and bus or train for 5 percent of the trips.

Business and conventions and to visit relatives or friends were the two main purposes for traveling. Together, these reasons accounted for 60 percent of all travel taken in 1977; visiting friends or relatives accounted for 32 percent and business and conventions accounted for 28 percent.

Even though the volume of travel for the two purposes was about the same, their trip characteristics differed markedly. Airplane was used for 33 percent of the business and convention trips but for only 11 percent of the trips to visit relatives or friends. The average duration of trips to visit (5 nights) was longer than that spent on business (2.8 nights). Furthermore, the average number of household members who went on trips to visit relatives or friends (1.9), was larger than the average number who went on business and convention trips (1.2), indicating the family nature of the visiting trips. Another difference was that travelers on visiting trips were more likely to engage in recreational activities (46 percent of the trips) than those on business trips (19 percent of the trips).

Business and convention trips accounted for 61 percent of all trips on which an automobile was rented and 42 percent of all trips for which a travel agent was used. In comparison, visiting trips accounted for only 13 percent of all the trips for which an automobile was rented and 21 percent of all the trips for which a travel agent was used.

Round trip distance and major means of transportation—One-half of all trips taken in 1977 were to destinations 100 to 200 miles (one-way) from home. The average roundtrip length was 747 miles, excluding trips to destinations outside the United States, for which mileage was not computed in the survey. The average distance for automobile and truck trips was 500 miles, compared with 585 miles for bus trips, 878 miles for train trips, and 1,845 miles for airplane trips. These findings suggest that the bus, train, automobile, and truck compete for the major means of transportation on trips of relatively short distance. The airplane is, by far, favored for long distance travel; it is the means of transportation for 54 percent of all travel to destinations 500 miles of more from home.

Duration of trip and overnight accommodations—Travelers spent an average of 4 nights on a trip. Visiting trips averaged 5 nights and business trips averaged 2.8. Of the trips lasting 16 nights or more, 45 percent were visiting trips. Approximately 20 percent of all trips taken were 1-day trips not involving overnight travel; 41 percent of them were business and convention trips.

As a result of differences in trip duration and size of travel party, trips to visit relatives or friends contributed to over 41 percent of all person-nights spent away from home; 86 percent of these nights were spent in the homes of relatives or friends and 9 percent were spent in rental accommodations. Business and convention trips represented only 14 percent of all the trips involving nights spent away from home, but 30 percent of the nights spent in rental accommodations. Trips taken primarily for outdoor recreation accounted for almost half (46 percent) of the nights spent at campground facilities and in travelers' own vacation homes or cabins.

Vacation or other trip—Approximately 32 percent of all trips taken during 1977 were vacation trips. An automobile or truck was used on 74 percent of vacation trips and the airplane used on 17 percent of these trips. The most frequently reported reason for taking vacation trips was to visit relatives or friends (45 percent of all vacation trips). Another 44 percent of vacation travel was for sightseeing, entertainment, and outdoor recreation. The most popular vacation spots were the States in the South travel region, followed closely by the States in the Far West and Great Lakes Country regions. The most popular recreational activities were visiting scenic areas and national parks (on 31 percent of vacation trips) and swimming (on 26 percent of vacation trips). Approximately 22 percent of the households on vacation trips did not engage in any outdoor recreational activities.

HOUSEHOLD AND TRAVELER CHARACTERISTICS

Family income—As previously mentioned, about 72 percent of the Nation's households took at least one trip of 100 miles or more one-way during 1977, indicating that travel is widespread among all segments of the population. Only among households in the family income category under $5,000 did the number of households who did not travel approximate the number who did.

In general, the survey results show that the higher the income of the household, the more likely it was to have traveled during the year. The percentage of households in each family income group who traveled ranged from 49 percent in the "under $5,000" category to 92 percent in the $25,000 to $49,999" category.

Among traveling households, those in the higher income categories also averaged more trips during the year than those in the lower income categories, ranging from an average of 3.8 trips in the "under $5,000" category to 12.9 trips in the "$50,000 and over "category. Another indication of the relationship between income and travel is that although households with family incomes of less than $10,000 constituted almost 40 percent of the population, they accounted for only 21 percent of the trips taken. Conversely, households with income of $25,000 and over represented 12 percent of the population but took 26 percent of all the trips during the year.

The difference in travel among income groups is particularly reflected in business and convention trips. About 39 percent of these trips were taken by households with family incomes of $25,000 and over and was the main purpose of travel in this income category. Moreover, households whose family income was $25,000 and over accounted for 42 percent of the airplane travel and 37 percent of the train travel. In contrast, households with family income under $10,000 took only 14 percent of the airplane trips and 22 percent of the train trips.

Bus travel by income classification displayed an interesting pattern. The percentage distribution by family income of household trips taken by bus closely resembled the distribution of households in the United States by income. For example, 16 percent of the households had family incomes between $15,000 and $19,999, and slightly over 15 percent of the trips by bus were taken by households in this income category. Likewise, 20 percent of the households had family incomes under $5,000, and 18 percent of the trips by bus were taken by households in this category. This type of relationship held for each income category shown in this report.

As this report was going to print it was found that approximately 1 percent of the households had not reported their family income. They had been tabulated in the $15,000 to $19,999 family income category, but a review indicated that approximately half of them (about 350,000 households using the weighted estimate) should have been tabulated in the "under $5,000" category and remainder distributed among the other categories. This problem does not change the total estimates of travel; it affects only the distribution of households and trips by family income.

The 1977 National Travel Survey User Tape has been corrected, so its estimates of income will differ slightly from the estimates published in this report.

Occupation of household head—Households headed by white-collar workers took over half (55 percent) of all trips although they represented only 33 percent of the population. Conversely, households headed by persons not currently employed or retired represented almost one-third (32 percent) of the population but accounted for only 17 percent of all trips taken during 1977.

Persons in the age group 25 to 44 years were more likely to have traveled than persons in other age groups: Almost 72 percent of them took one or more trips during 1977 and the group averaged almost 1.2 trips per person more than persons in all the other age groups combined. Although the number of males and females who traveled during the year was approximately the same, males who traveled averaged one trip more than females. The major reason for this difference was that males took 77 percent of the business and convention trips.

Regional Travel

The 1977 NTS provides data on origin and destination of trips for eight travel regions within the United States. They are the same as the ones used in 1972. They parallel the designations used by the U.S. Travel Service and the Discover America Travel Organization, except that for the NTS Hawaii is included in the Far West Region instead of the Islands group. (See regions map on page XXVII.)

Region of origin—As expected, the regions with the largest populations—the Great Lakes Country and the South—also generated the greatest volume of travel, accounting for 23 percent and 18 percent of all trips taken in 1977. These two regions also represent 41 percent of the population. However, the three western regions—the Mountain West, the Frontier West, and the Far West were among the leaders in trips per capita and trips per traveler (table A).

The main reason reported for traveling did not vary noticeably among the travel regions with visiting relatives and friends and business and convention being the two major reasons. However, some distinguishable differences appear among regions in the means of transportation. In the Eastern Gateway region, the bus, train, or airplane were used in 34 percent of the trips originating in that region (the highest percent for these means among the eight travel regions).

Region of destination—Most travel in 1977 was intraregional; i.e., both the origin and destination of a trip were located within the same region. Only in the Eastern Gateway region did a majority of trips (54 percent) to the region originate in another region. The Far West region had the highest percentage of intraregional trips (82 percent). Not surprisingly, a strong relationship exists between the region's population and the number of trips to destinations in the region, with the regions having the largest population also having the largest number of trips.

Nights spent away from home by travelers are presented in two ways in this report. Tables 14 and 15 place all nights spent on a trip in the region of destination, even though one or more of the nights may have been spent in another region. Tables 16 and 17 show the actual region in which the nights were spent,

Table A. Trips Per Capita and Trips Per Traveling Person by Travel Region of Residence: 1977

Travel region of residence	Trips per capita	Trips per traveling person
Total	2.5	4.0
New England	1.9	3.4
Eastern Gateway	1.7	3.4
George Washington Country	2.2	3.8
South	2.4	3.8
Great Lakes Country	2.7	4.0
Mountain West	3.8	4.8
Frontier West	3.1	4.4
Far West and Hawaii	2.8	4.1

regardless of the region of destination. Nights spent traveling enroute without stopping for the evening are not included in tables 16 and 17, because a night's travel may have involved passing through more than one region. There were an estimated 20,944,000 such nights, about 1 percent of the total nights spent away from home. This figure represents the difference between the sum of the nights shown in tables 14 and 15 and the sum of the nights shown in tables 16 and 17.

As expected, the regions in which the largest number of trips were taken were the regions in which the most nights were spent. However, in terms of the nights spent in a region per person-trip, the New England region had one of the highest averages (4.6 nights per trip), even though it ranked among the lowest in number of nights spent in it. Conversely, the Great Lakes Country region ranked second in number of nights spent there, but last in number of nights per trip (3.2 nights). The South region ranked first in number of nights spent there and averaged 4.5 nights per trip.

The most popular type of overnight accommodation was with relatives or friends, ranging from 43 percent of nights spent in New England to 61 percent in the Great Lakes Country. New England, the South, and the Far West regions were among the leaders in percentage of nights spent in rental accommodations (slightly over one-third). Nights spent in public or commercial campgrounds were high in the South and Far West regions. Nights spent in own cabin, campsite, or vacation home was highest in the Great Lakes Country and the South.

Net flows—Since 67 percent of 1977 travel was intraregional, a net-flow concept aids in determining which regions were net "attracters" and which regions were net "generators" of travel.

The net accounts data shown in table B exclude trips to destinations outside the United States. In the Destination Net Flow column, (+) indicates that the region attracted more travel from other regions than it generated. Conversely, (-) indicates that the region generated more travel to other regions than it attracted. Note that small differences in table B may not be statistically significant, because the estimates are subject to sampling and nonsampling error (see Reliability of the Estimates for a complete discussion of sampling error).

As shown in table B, the South was a leading region in attracting travelers; over 8 million more trips ended than originated there. In terms of person-trips, the South attracted almost 17 million more than it generated. In contrast, the Great Lakes Country region generated 7.5 million more trips and almost 15 million more person-trips than it attracted. Overall, four regions were net "attracters" and four were net "generators," although the differences in five of the regions were statistically insignificant.

Travel to Destinations Outside the United States

Households made over 10 million trips to destinations outside the United States during 1977. These trips comprised 18 million person-trips and reflected 165 million person-nights away from home. Travel to Canada and Mexico accounted for 56 percent of these trips. The most common means of transportation to these countries were the automobile or truck, accounting for 68 percent of the trips.

Travel to Europe represented an additional 18 percent of the trips to destinations outside the United States. Table 6 shows trips to selected destinations outside the United States by purpose. Tables 28 and 29 give more detailed information on travel to Canada and Mexico.

Quarterly Travel

The heaviest travel during the year occurred in the third quarter, July-September, primarily because more vacation trips were taken then. Almost 50 percent of the households took one or more trips during the third quarter, a higher percentage than any other quarter. The third quarter accounted for 28.7 percent of the total trips and 38 percent of the vacation trips taken in 1977. Correspondingly, travel by automobile and truck for nonbusiness purposes, such as outdoor recreation, entertainment, and sightseeing, in the third quarter exceeded that in any other quarter. Travel by commercial carrier (airplane, bus, and train) remained almost the same in the third quarter as in the first two quarters. Tables 18 to 27 shows data on travel by calendar quarters.

Automobile and Truck Trips

The information on automobile and truck trips presented in this report covers any household trip that one or more members of a household made by automobile or truck, even if the trip was made in another household's vehicle. Thus if household A and household B went on a trip together in household B's vehicle, the trip is counted as two household trips, one for household A and one for household B.

Table B. Destination Net Flow: 1977

(Millions)

Region	Region of origin[1]	Region of destination	Destination net flow
Household trips:			
New England	14.1	13.6	-.5
Eastern Gateway	24.0	20.6	-3.4
George Washington Country	30.3	30.4	+.1
South	55.3	63.6	+8.3
Great Lakes Country	69.3	61.8	-7.5
Mountain West	15.7	17.4	+1.7
Frontier West	46.1	45.4	-.7
Far West and Hawaii	47.3	49.3	+2.0
Person-trips:			
New England	22.2	22.4	+.2
Eastern Gateway	41.0	34.7	-6.3
George Washington Country	51.9	50.8	-1.1
South	95.2	111.9	+16.7
Great Lakes Country	124.3	109.5	-14.8
Mountain West	28.3	30.5	+2.2
Frontier West	78.3	78.1	-.2
Far West and Hawaii	80.4	83.6	+3.2
Person-nights:			
New England	[2]91.7	[3]102.3	+10.6
Eastern Gateway	[2]182.2	[3]120.3	-61.9
George Washington Country	[2]191.4	[3]166.4	-25.0
South	[2]354.2	[3]501.5	+147.3
Great Lakes Country	[2]472.5	[3]354.0	-118.5
Mountain West	[2]93.5	[3]118.3	+24.8
Frontier West	[2]279.8	[3]290.1	+10.3
Far West and Hawaii	[2]313.1	[3]325.4	+12.3

[1]Excludes trips to destination outside the United States.
[2]Excludes nights enroute.
[3]For region in which nights spent rather than region of destination, excludes nights spent enroute.

Table C counts only those automobile and truck trips for which the vehicle was owned or rented by the household. There, the trip by households A and B shows as only one automobile trip, since household A was riding in household B's vehicle. This table provides estimates of the number of automobile and truck trips taken rather than the number of household trips taken by automobile and truck. Presenting the information this way should benefit transportation planners and others who are interested in vehicle-miles traveled.

Comparison With Previous National Travel Surveys

As the section on comparisons of the data from the 1967, 1972, and 1977 National Travel Surveys in the introduction indicates, caution should be used in comparing the data from the three surveys because of differences in the methodologies and procedures among them. In particular, note that in these highlights estimates from the 1967 NTS include only those trips that were 100 miles or more away from home.

The estimate of total trips in 1977 is 313 million, which is an increase of 76 million over the 1972 estimate and an increase of 183 million over the 1967 estimate. The 1977 estimate represents a 32-percent increase in travel in the past 5 years and a 140-percent increase in the past 10 years. Person-trips also increased substantially from 253 million in 1967 to 539 million in 1977. This reflects an 18-percent increase in the past 5 years and a 113-percent increase in the past 10 years. However, the average number of trips per traveler remained approximately the same between 1972 and 1977.

The households that took one or more trips during the survey year increased by 9 percent in 10 years from 63 to 72 percent. However, the distribution of trips by means of transportation and by trip purpose was virtually the same for the 3 survey years, as shown in table D.

Table C. Automobile and Truck Trips by Selected Trip Characteristics: 1977

Characteristics	Number (1,000)	Percent	Characteristics	Number (1,000)	Percent
Automobile and truck trips	186,601	100.0	Duration of trip--Con.

TABLE 2A. TRAVEL BY SELECTED TRIP CHARACTERISTICS--CON.

(FOR MEANING OF ABBREVIATIONS AND SYMBOLS, SEE INTRODUCTORY TEXT)

TRIP CHARACTERISTICS	HOUSEHOLD TRIPS (1,000)		PERSON-TRIPS (1,000)		PERSON-MILES (MILLIONS)		PERSON-NIGHTS[1] (1,000)	
	NUMBER	PERCENT[2]	NUMBER	PERCENT[2]	NUMBER	PERCENT[2]	NUMBER	PERCENT[2]
NUMBER ON TRIP								
1 PERSON	[4]185 779	59.44	[4]186 400	34.56	147 303	38.51	728 631	33.66
2 PERSONS	[4]78 748	25.20	[4]164 400	30.48	119 127	31.15	727 031	33.59
3 PERSONS	[4]21 176	6.78	[4]65 434	12.13	43 005	11.24	249 820	11.54
4 PERSONS	[4]17 522	5.61	[4]71 937	13.34	43 018	11.25	259 499	11.99
5 PERSONS OR MORE	[4]9 308	2.98	[4]51 118	9.48	30 014	7.85	199 382	9.21
MEAN	1.7	(Z)	2.4	(Z)	(Z)	(Z)	(Z)	(Z)
COMPOSITION OF HOUSEHOLD TRAVEL PARTY								
TRAVEL PARTIES WITH NO PERSONS UNDER 18 YEARS OLD	243 034	77.76	323 753	60.03	247 831	64.80	1 305 995	60.34
TRAVEL PARTIES WITH PERSONS UNDER 18 YEARS OLD	54 299	17.37	197 635	36.65	122 182	31.95	753 018	34.79
TRAVEL PARTIES WITH ONLY PERSONS UNDER 18 YEARS OLD	15 199	4.86	17 901	3.32	12 453	3.26	105 349	4.87

[1] INCLUDES NIGHTS ENROUTE.
[2] PERCENTAGES ARE CALCULATED VERTICALLY.
[3] FOR REGION IN WHICH NIGHTS SPENT RATHER THAN REGION OF DESTINATION. NIGHTS SPENT ENROUTE ARE INCLUDED IN TOTAL BUT NOT IN ANY REGION.
[4] APPARENT INCONSISTENCY BETWEEN FIGURE FOR HOUSEHOLD TRIPS AND THAT FOR PERSON-TRIPS IS BECAUSE THE TWO KINDS OF TRIPS WERE WEIGHTED INDEPENDENTLY.

5 PERSONS OR MORE	[4]1 855	2.40	[4]10 036	8.01	5 291	6.12	31 163	7.20
MEAN	1.6	(Z)	2.2	(Z)	(Z)	(Z)	(Z)	(Z)
COMPOSITION OF HOUSEHOLD TRAVEL PARTY								
TRAVEL PARTIES WITH NO PERSONS UNDER 18 YEARS OLD	63 200	81.72	81 588	65.10	61 752	71.40	299 189	69.12
TRAVEL PARTIES WITH PERSONS UNDER 18 YEARS OLD	11 371	14.70	40 508	32.32	22 730	26.28	123 641	28.56
TRAVEL PARTIES WITH ONLY PERSONS UNDER 18 YEARS OLD	2 763	3.57	3 238	2.58	2 000	2.31	10 010	2.31

[1]INCLUDES NIGHTS ENROUTE.
[2]PERCENTAGES ARE CALCULATED VERTICALLY.
[3]FOR REGION IN WHICH NIGHTS SPENT RATHER THAN REGION OF DESTINATION. NIGHTS SPENT ENROUTE ARE INCLUDED IN TOTAL BUT NOT IN ANY REGION.
[4]APPARENT INCONSISTENCY BETWEEN FIGURE FOR HOUSEHOLD TRIPS AND THAT FOR PERSON-TRIPS IS BECAUSE THE TWO KINDS OF TRIPS WERE WEIGHTED INDEPENDENTLY.

TABLE 20. FIRST QUARTER--TRAVEL BY SELECTED TRAVELER CHARACTERISTICS

COMPOSITION OF HOUSEHOLD TRAVEL PARTY								
TRAVEL PARTIES WITH NO PERSONS UNDER 18 YEARS OLD	64 416	71.91	87 810	52.68	67 059	54.40	408 357	48.98
TRAVEL PARTIES WITH PERSONS UNDER 18 YEARS OLD	19 408	21.67	71 980	43.18	50 452	40.93	358 876	43.04
TRAVEL PARTIES WITH ONLY PERSONS UNDER 18 YEARS OLD	5 749	6.42	6 895	4.14	5 750	4.66	66 554	7.98

[1]INCLUDES NIGHTS ENROUTE.

[2]PERCENTAGES ARE CALCULATED VERTICALLY.

[3]FOR REGION IN WHICH NIGHTS SPENT RATHER THAN REGION OF DESTINATION. NIGHTS SPENT ENROUTE ARE INCLUDED IN TOTAL BUT NOT IN ANY REGION.

[4]APPARENT INCONSISTENCY BETWEEN FIGURE FOR HOUSEHOLD TRIPS AND THAT FOR PERSON-TRIPS IS BECAUSE THE TWO KINDS OF TRIPS WERE WEIGHTED INDEPENDENTLY.

[2] PERCENTAGES ARE CALCULATED VERTICALLY.
[3] FOR REGION IN WHICH NIGHTS SPENT RATHER THAN REGION OF DESTINATION. NIGHTS SPENT ENROUTE ARE INCLUDED IN TOTAL BUT NOT IN ANY REGION.
[4] APPARENT INCONSISTENCY BETWEEN FIGURE FOR HOUSEHOLD TRIPS AND THAT FOR PERSON-TRIPS IS BECAUSE THE TWO KINDS OF TRIPS WERE WEIGHTED INDEPENDENTLY.

TABLE 20. FOURTH QUARTER--TRAVEL BY SELECTED TRAVELER CHARACTERISTICS

(FOR MEANING OF ABBREVIATIONS AND SYMBOLS, SEE INTRODUCTORY TEXT)

[1] INCLUDES TRIPS TO DESTINATIONS OUTSIDE THE STATES.
[2] NIGHTS SPENT IN STATE.
[3] INCLUDES TOTAL NIGHTS SPENT ON TRIP, NOT JUST NIGHTS SPENT IN STATE.
[4] APPARENT INCONSISTENCY BETWEEN FIGURE FOR HOUSEHOLD TRIPS AND THAT FOR PERSON-TRIPS IS BECAUSE THE TWO KINDS OF TRIPS WERE WEIGHTED INDEPENDENTLY.

[1] INCLUDES TRIPS TO DESTINATIONS OUTSIDE THE UNITED STATES.
[2] NIGHTS SPENT IN STATE.
[3] INCLUDES TOTAL NIGHTS SPENT ON TRIP, NOT JUST NIGHTS SPENT IN STATE.
[4] APPARENT INCONSISTENCY BETWEEN FIGURE FOR HOUSEHOLD TRIPS AND THAT FOR PERSON-TRIPS IS BECAUSE THE TWO KINDS OF TRIPS WERE WEIGHTED INDEPENDENTLY.

[1] INCLUDES TRIPS TO DESTINATIONS OUTSIDE THE UNITED STATES.
[2] NIGHTS SPENT IN STATE.
[3] INCLUDES TOTAL NIGHTS SPENT ON TRIP, NOT JUST NIGHTS SPENT IN STATE.
[4] APPARENT INCONSISTENCY BETWEEN FIGURE FOR HOUSEHOLD TRIPS AND THAT FOR PERSON-TRIPS IS BECAUSE THE TWO KINDS OF TRIPS WERE WEIGHTED INDEPENDENTLY.

[1] INCLUDES TRIPS TO DESTINATIONS OUTSIDE THE UNITED STATES.
[2] NIGHTS SPENT IN STATE.
[3] INCLUDES TOTAL NIGHTS SPENT ON TRIP, NOT JUST NIGHTS SPENT IN STATE.
[4] APPARENT INCONSISTENCY BETWEEN FIGURE FOR HOUSEHOLD TRIPS AND THAT FOR PERSON-TRIPS IS BECAUSE THE TWO KINDS OF TRIPS WERE WEIGHTED INDEPENDENTLY.

TABLE 29. ARKANSAS--TRAVEL TO AND THROUGH THE STATE BY SELECTED HOUSEHOLD AND TRAVELER CHARACTERISTICS

(IN THOUSANDS. FOR MEANING OF ABBREVIATIONS AND SYMBOLS, SEE INTRODUCTORY TEXT)

[1] INCLUDES TRIPS TO DESTINATIONS OUTSIDE THE UNITED STATES.
[2] NIGHTS SPENT IN STATE.
[3] INCLUDES TOTAL NIGHTS SPENT ON TRIP, NOT JUST NIGHTS SPENT IN STATE.
[4] APPARENT INCONSISTENCY BETWEEN FIGURE FOR HOUSEHOLD TRIPS AND THAT FOR PERSON-TRIPS IS BECAUSE THE TWO KINDS OF TRIPS WERE WEIGHTED INDEPENDENTLY.

[2]NIGHTS SPENT IN STATE.
[3]INCLUDES TOTAL NIGHTS SPENT ON TRIP, NOT JUST NIGHTS SPENT IN STATE.
[4]APPARENT INCONSISTENCY BETWEEN FIGURE FOR HOUSEHOLD TRIPS AND THAT FOR PERSON-TRIPS IS BECAUSE THE TWO KINDS OF TRIPS WERE WEIGHTED INDEPENDENTLY.

TABLE 29. COLORADO--TRAVEL TO AND THROUGH THE STATE BY SELECTED HOUSEHOLD AND TRAVELER CHARACTERISTICS

(IN THOUSANDS. FOR MEANING OF ABBREVIATIONS AND SYMBOLS, SEE INTRODUCTORY TEXT)

[1] INCLUDES TRIPS TO DESTINATIONS OUTSIDE THE UNITED STATES.
[2] NIGHTS SPENT IN STATE.
[3] INCLUDES TOTAL NIGHTS SPENT ON TRIP, NOT JUST NIGHTS SPENT IN STATE.
[4] APPARENT INCONSISTENCY BETWEEN FIGURE FOR HOUSEHOLD TRIPS AND THAT FOR PERSON-TRIPS IS BECAUSE THE TWO KINDS OF TRIPS WERE WEIGHTED INDEPENDENTLY.

[1] INCLUDES TRIPS TO DESTINATIONS OUTSIDE THE UNITED STATES.
[2] NIGHTS SPENT IN STATE.
[3] INCLUDES TOTAL NIGHTS SPENT ON TRIP, NOT JUST NIGHTS SPENT IN STATE.
[4] APPARENT INCONSISTENCY BETWEEN FIGURE FOR HOUSEHOLD TRIPS AND THAT FOR PERSON-TRIPS IS BECAUSE THE TWO KINDS OF TRIPS WERE WEIGHTED INDEPENDENTLY.

[1] INCLUDES TRIPS TO DESTINATIONS OUTSIDE THE UNITED STATES.
[2] NIGHTS SPENT IN STATE.
[3] INCLUDES TOTAL NIGHTS SPENT ON TRIP, NOT JUST NIGHTS SPENT IN STATE.
[4] APPARENT INCONSISTENCY BETWEEN FIGURE FOR HOUSEHOLD TRIPS AND THAT FOR PERSON-TRIPS IS BECAUSE THE TWO KINDS OF TRIPS WERE WEIGHTED INDEPENDENTLY.

[1] INCLUDES TRIPS TO DESTINATIONS OUTSIDE THE UNITED STATES.
[2] NIGHTS SPENT IN STATE.
[3] INCLUDES TOTAL NIGHTS SPENT ON TRIP, NOT JUST NIGHTS SPENT IN STATE.
[4] APPARENT INCONSISTENCY BETWEEN FIGURE FOR HOUSEHOLD TRIPS AND THAT FOR PERSON-TRIPS IS BECAUSE THE TWO KINDS OF TRIPS WERE WEIGHTED INDEPENDENTLY.

TABLE 29. FLORIDA--TRAVEL TO AND THROUGH THE STATE BY SELECTED HOUSEHOLD AND TRAVELER CHARACTERISTICS

(IN THOUSANDS. FOR MEANING OF ABBREVIATIONS AND SYMBOLS, SEE INTRODUCTORY TEXT)

[1] INCLUDES TRIPS TO DESTINATIONS OUTSIDE THE UNITED STATES.
[2] NIGHTS SPENT IN STATE.
[3] INCLUDES TOTAL NIGHTS SPENT ON TRIP, NOT JUST NIGHTS SPENT IN STATE.
[4] APPARENT INCONSISTENCY BETWEEN FIGURE FOR HOUSEHOLD TRIPS AND THAT FOR PERSON-TRIPS IS BECAUSE THE TWO KINDS OF TRIPS WERE WEIGHTED INDEPENDENTLY.

[1] INCLUDES TRIPS TO DESTINATIONS OUTSIDE THE UNITED STATES.
[2] NIGHTS SPENT IN STATE.
[3] INCLUDES TOTAL NIGHTS SPENT ON TRIP, NOT JUST NIGHTS SPENT IN STATE.
[4] APPARENT INCONSISTENCY BETWEEN FIGURE FOR HOUSEHOLD TRIPS AND THAT FOR PERSON-TRIPS IS BECAUSE THE TWO KINDS OF TRIPS WERE WEIGHTED INDEPENDENTLY.

[1] INCLUDES TRIPS TO DESTINATIONS OUTSIDE THE UNITED STATES.
[2] NIGHTS SPENT IN STATE.
[3] INCLUDES TOTAL NIGHTS SPENT ON TRIP, NOT JUST NIGHTS SPENT IN STATE.
[4] APPARENT INCONSISTENCY BETWEEN FIGURE FOR HOUSEHOLD TRIPS AND THAT FOR PERSON-TRIPS IS BECAUSE THE TWO KINDS OF TRIPS WERE WEIGHTED INDEPENDENTLY.

[1]INCLUOES TRIPS TO OESTINATIONS OUTSIOE THE UNITEO STATES.
[2]NIGHTS SPENT IN STATE.
[3]INCLUOES TOTAL NIGHTS SPENT ON TRIP, NOT JUST NIGHTS SPENT IN STATE.
[4]APPARENT INCONSISTENCY BETWEEN FIGURE FOR HOUSEHOLO TRIPS ANO THAT FOR PERSON-TRIPS IS BECAUSE THE TWO KINOS OF TRIPS WERE WEIGHTEO INOEPENOENTLY.

[1] INCLUDES TRIPS TO DESTINATIONS OUTSIDE THE UNITED STATES.
[2] NIGHTS SPENT IN STATE.
[3] INCLUDES TOTAL NIGHTS SPENT ON TRIP, NOT JUST NIGHTS SPENT IN STATE.
[4] APPARENT INCONSISTENCY BETWEEN FIGURE FOR HOUSEHOLD TRIPS AND THAT FOR PERSON-TRIPS IS BECAUSE THE TWO KINDS OF TRIPS WERE WEIGHTED INDEPENDENTLY.

[1] INCLUDES TRIPS TO DESTINATIONS OUTSIDE THE UNITED STATES.
[2] NIGHTS SPENT IN STATE.
[3] INCLUDES TOTAL NIGHTS SPENT ON TRIP, NOT JUST NIGHTS SPENT IN STATE.
[4] APPARENT INCONSISTENCY BETWEEN FIGURE FOR HOUSEHOLD TRIPS AND THAT FOR PERSON-TRIPS IS BECAUSE THE TWO KINDS OF TRIPS WERE WEIGHTED INDEPENDENTLY.

[1] INCLUDES TRIPS TO DESTINATIONS OUTSIDE THE UNITED STATES.

[2] NIGHTS SPENT IN STATE.

[3] INCLUDES TOTAL NIGHTS SPENT ON TRIP, NOT JUST NIGHTS SPENT IN STATE.

[4] APPARENT INCONSISTENCY BETWEEN FIGURE FOR HOUSEHOLD TRIPS AND THAT FOR PERSON-TRIPS IS BECAUSE THE TWO KINDS OF TRIPS WERE WEIGHTED INDEPENDENTLY.

[1] INCLUDES TRIPS TO DESTINATIONS OUTSIDE THE UNITED STATES.

[2] NIGHTS SPENT IN STATE.

[3] INCLUDES TOTAL NIGHTS SPENT ON TRIP, NOT JUST NIGHTS SPENT IN STATE.

[4] APPARENT INCONSISTENCY BETWEEN FIGURE FOR HOUSEHOLD TRIPS AND THAT FOR PERSON-TRIPS IS BECAUSE THE TWO KINDS OF TRIPS WERE WEIGHTED INDEPENDENTLY.

[1] INCLUDES TRIPS TO DESTINATIONS OUTSIDE THE UNITED STATES.
[2] NIGHTS SPENT IN STATE.
[3] INCLUDES TOTAL NIGHTS SPENT ON TRIP, NOT JUST NIGHTS SPENT IN STATE.
[4] APPARENT INCONSISTENCY BETWEEN FIGURE FOR HOUSEHOLD TRIPS AND THAT FOR PERSON-TRIPS IS BECAUSE THE TWO KINDS OF TRIPS WERE WEIGHTED INDEPENDENTLY.

[1] INCLUDES TRIPS TO DESTINATIONS OUTSIDE THE UNITED STATES.
[2] NIGHTS SPENT IN STATE.
[3] INCLUDES TOTAL NIGHTS SPENT ON TRIP, NOT JUST NIGHTS SPENT IN STATE.
[4] APPARENT INCONSISTENCY BETWEEN FIGURE FOR HOUSEHOLD TRIPS AND THAT FOR PERSON-TRIPS IS BECAUSE THE TWO KINDS OF TRIPS WERE WEIGHTED INDEPENDENTLY.

[1]INCLUDES TRIPS TO DESTINATIONS OUTSIDE THE UNITED STATES.
[2]NIGHTS SPENT IN STATE.
[3]INCLUDES TOTAL NIGHTS SPENT ON TRIP, NOT JUST NIGHTS SPENT IN STATE.
[4]APPARENT INCONSISTENCY BETWEEN FIGURE FOR HOUSEHOLD TRIPS AND THAT FOR PERSON-TRIPS IS BECAUSE THE TWO KINDS OF TRIPS WERE WEIGHTED INDEPENDENTLY.

[1] INCLUDES TRIPS TO DESTINATIONS OUTSIDE THE UNITED STATES.

[2] NIGHTS SPENT IN STATE.

[3] INCLUDES TOTAL NIGHTS SPENT ON TRIP, NOT JUST NIGHTS SPENT IN STATE.

[4] APPARENT INCONSISTENCY BETWEEN FIGURE FOR HOUSEHOLD TRIPS AND THAT FOR PERSON-TRIPS IS BECAUSE THE TWO KINDS OF TRIPS WERE WEIGHTED INDEPENDENTLY.

[1] INCLUDES TRIPS TO DESTINATIONS OUTSIDE THE UNITED STATES.
[2] NIGHTS SPENT IN STATE.
[3] INCLUDES TOTAL NIGHTS SPENT ON TRIP, NOT JUST NIGHTS SPENT IN STATE.
[4] APPARENT INCONSISTENCY BETWEEN FIGURE FOR HOUSEHOLD TRIPS AND THAT FOR PERSON-TRIPS IS BECAUSE THE TWO KINDS OF TRIPS WERE WEIGHTED INDEPENDENTLY.

[1]INCLUDES TRIPS TO DESTINATIONS OUTSIDE THE UNITED STATES.
[2]NIGHTS SPENT IN STATE.
[3]INCLUDES TOTAL NIGHTS SPENT ON TRIP, NOT JUST NIGHTS SPENT IN STATE.
[4]APPARENT INCONSISTENCY BETWEEN FIGURE FOR HOUSEHOLD TRIPS AND THAT FOR PERSON-TRIPS IS BECAUSE THE TWO KINDS OF TRIPS WERE WEIGHTED INDEPENDENTLY.

[1] INCLUDES TRIPS TO DESTINATIONS OUTSIDE THE UNITED STATES.
[2] NIGHTS SPENT IN STATE.
[3] INCLUDES TOTAL NIGHTS SPENT ON TRIP, NOT JUST NIGHTS SPENT IN STATE.
[4] APPARENT INCONSISTENCY BETWEEN FIGURE FOR HOUSEHOLD TRIPS AND THAT FOR PERSON-TRIPS IS BECAUSE THE TWO KINDS OF TRIPS WERE WEIGHTED INDEPENDENTLY.

[1]INCLUDES TRIPS TO DESTINATIONS OUTSIDE THE UNITED STATES.

[2]NIGHTS SPENT IN STATE.

[3]INCLUDES TOTAL NIGHTS SPENT ON TRIP, NOT JUST NIGHTS SPENT IN STATE.

[4]APPARENT INCONSISTENCY BETWEEN FIGURE FOR HOUSEHOLD TRIPS AND THAT FOR PERSON-TRIPS IS BECAUSE THE TWO KINDS OF TRIPS WERE WEIGHTED INDEPENDENTLY.

TABLE 29. MISSOURI--TRAVEL TO AND THROUGH THE STATE BY SELECTED HOUSEHOLD AND TRAVELER CHARACTERISTICS

[1] INCLUDES TRIPS TO DESTINATIONS OUTSIDE THE UNITED STATES.
[2] NIGHTS SPENT IN STATE.
[3] INCLUDES TOTAL NIGHTS SPENT ON TRIP, NOT JUST NIGHTS SPENT IN STATE.
[4] APPARENT INCONSISTENCY BETWEEN FIGURE FOR HOUSEHOLD TRIPS AND THAT FOR PERSON-TRIPS IS BECAUSE THE TWO KINDS OF TRIPS WERE WEIGHTED INDEPENDENTLY.

[1] INCLUDES TRIPS TO DESTINATIONS OUTSIDE THE UNITED STATES.
[2] NIGHTS SPENT IN STATE.
[3] INCLUDES TOTAL NIGHTS SPENT ON TRIP, NOT JUST NIGHTS SPENT IN STATE.
[4] APPARENT INCONSISTENCY BETWEEN FIGURE FOR HOUSEHOLD TRIPS AND THAT FOR PERSON-TRIPS IS BECAUSE THE TWO KINDS OF TRIPS WERE WEIGHTED INDEPENDENTLY.

[1]INCLUDES TRIPS TO DESTINATIONS OUTSIDE THE UNITED STATES.
[2]NIGHTS SPENT IN STATE.
[3]INCLUDES TOTAL NIGHTS SPENT ON TRIP, NOT JUST NIGHTS SPENT IN STATE.
[4]APPARENT INCONSISTENCY BETWEEN FIGURE FOR HOUSEHOLD TRIPS AND THAT FOR PERSON-TRIPS IS BECAUSE THE TWO KINDS OF TRIPS WERE WEIGHTED INDEPENDENTLY.

[1] INCLUDES TRIPS TO DESTINATIONS OUTSIDE THE UNITED STATES.

[2] NIGHTS SPENT IN STATE.

[3] INCLUDES TOTAL NIGHTS SPENT ON TRIP, NOT JUST NIGHTS SPENT IN STATE.

[4] APPARENT INCONSISTENCY BETWEEN FIGURE FOR HOUSEHOLD TRIPS AND THAT FOR PERSON-TRIPS IS BECAUSE THE TWO KINDS OF TRIPS WERE WEIGHTED INDEPENDENTLY.

[1]INCLUDES TRIPS TO DESTINATIONS OUTSIDE THE UNITED STATES.
[2]NIGHTS SPENT IN STATE.
[3]INCLUDES TOTAL NIGHTS SPENT ON TRIP, NOT JUST NIGHTS SPENT IN STATE.
[4]APPARENT INCONSISTENCY BETWEEN FIGURE FOR HOUSEHOLD TRIPS AND THAT FOR PERSON-TRIPS IS BECAUSE THE TWO KINDS OF TRIPS WERE WEIGHTED INDEPENDENTLY.

[1] INCLUDES TRIPS TO DESTINATIONS OUTSIDE THE UNITED STATES.

[2] NIGHTS SPENT IN STATE.

[3] INCLUDES TOTAL NIGHTS SPENT ON TRIP, NOT JUST NIGHTS SPENT IN STATE.

[4] APPARENT INCONSISTENCY BETWEEN FIGURE FOR HOUSEHOLD TRIPS AND THAT FOR PERSON-TRIPS IS BECAUSE THE TWO KINDS OF TRIPS WERE WEIGHTED INDEPENDENTLY.

[1] INCLUDES TRIPS TO DESTINATIONS OUTSIDE THE UNITED STATES.
[2] NIGHTS SPENT IN STATE.
[3] INCLUDES TOTAL NIGHTS SPENT ON TRIP, NOT JUST NIGHTS SPENT IN STATE.
[4] APPARENT INCONSISTENCY BETWEEN FIGURE FOR HOUSEHOLD TRIPS AND THAT FOR PERSON-TRIPS IS BECAUSE THE TWO KINDS OF TRIPS WERE WEIGHTED INDEPENDENTLY.

[1] INCLUDES TRIPS TO DESTINATIONS OUTSIDE THE UNITED STATES.
[2] NIGHTS SPENT IN STATE.
[3] INCLUDES TOTAL NIGHTS SPENT ON TRIP, NOT JUST NIGHTS SPENT IN STATE.
[4] APPARENT INCONSISTENCY BETWEEN FIGURE FOR HOUSEHOLD TRIPS AND THAT FOR PERSON-TRIPS IS BECAUSE THE TWO KINDS OF TRIPS WERE WEIGHTED INDEPENDENTLY.

[1] INCLUDES TRIPS TO DESTINATIONS OUTSIDE THE UNITED STATES.

[2] NIGHTS SPENT IN STATE.

[3] INCLUDES TOTAL NIGHTS SPENT ON TRIP, NOT JUST NIGHTS SPENT IN STATE.

[4] APPARENT INCONSISTENCY BETWEEN FIGURE FOR HOUSEHOLD TRIPS AND THAT FOR PERSON-TRIPS IS BECAUSE THE TWO KINDS OF TRIPS WERE WEIGHTED INDEPENDENTLY.

[1]INCLUDES TRIPS TO DESTINATIONS OUTSIDE THE UNITED STATES.
[2]NIGHTS SPENT IN STATE.
[3]INCLUDES TOTAL NIGHTS SPENT ON TRIP, NOT JUST NIGHTS SPENT IN STATE.
[4]APPARENT INCONSISTENCY BETWEEN FIGURE FOR HOUSEHOLD TRIPS AND THAT FOR PERSON-TRIPS IS BECAUSE THE TWO KINDS OF TRIPS WERE WEIGHTED INDEPENDENTLY.

[1] INCLUDES TRIPS TO DESTINATIONS OUTSIDE THE UNITED STATES.
[2] NIGHTS SPENT IN STATE.
[3] INCLUDES TOTAL NIGHTS SPENT ON TRIP, NOT JUST NIGHTS SPENT IN STATE.
[4] APPARENT INCONSISTENCY BETWEEN FIGURE FOR HOUSEHOLD TRIPS AND THAT FOR PERSON-TRIPS IS BECAUSE THE TWO KINDS OF TRIPS WERE WEIGHTED INDEPENDENTLY.

[2]NIGHTS SPENT IN STATE.
[3]INCLUDES TOTAL NIGHTS SPENT ON TRIP, NOT JUST NIGHTS SPENT IN STATE.
[4]APPARENT INCONSISTENCY BETWEEN FIGURE FOR HOUSEHOLD TRIPS AND THAT FOR PERSON-TRIPS IS BECAUSE THE TWO KINDS OF TRIPS WERE WEIGHTED INDEPENDENTLY.

TABLE 29. SOUTH DAKOTA--TRAVEL TO AND THROUGH THE STATE BY SELECTED HOUSEHOLD AND TRAVELER CHARACTERISTICS

(IN THOUSANDS. FOR MEANING OF ABBREVIATIONS AND SYMBOLS, SEE INTRODUCTORY TEXT)

[1] INCLUDES TRIPS TO DESTINATIONS OUTSIDE THE UNITED STATES.
[2] NIGHTS SPENT IN STATE.
[3] INCLUDES TOTAL NIGHTS SPENT ON TRIP, NOT JUST NIGHTS SPENT IN STATE.
[4] APPARENT INCONSISTENCY BETWEEN FIGURE FOR HOUSEHOLD TRIPS AND THAT FOR PERSON-TRIPS IS BECAUSE THE TWO KINDS OF TRIPS WERE WEIGHTED INDEPENDENTLY.

[1] INCLUDES TRIPS TO DESTINATIONS OUTSIDE THE UNITED STATES.
[2] NIGHTS SPENT IN STATE.
[3] INCLUDES TOTAL NIGHTS SPENT ON TRIP, NOT JUST NIGHTS SPENT IN STATE.
[4] APPARENT INCONSISTENCY BETWEEN FIGURE FOR HOUSEHOLD TRIPS AND THAT FOR PERSON-TRIPS IS BECAUSE THE TWO KINDS OF TRIPS WERE WEIGHTED INDEPENDENTLY.

TABLE 29. TEXAS--TRAVEL TO AND THROUGH THE STATE BY SELECTED HOUSEHOLD AND TRAVELER CHARACTERISTICS

[1] INCLUDES TRIPS TO DESTINATIONS OUTSIDE THE UNITED STATES.
[2] NIGHTS SPENT IN STATE.
[3] INCLUDES TOTAL NIGHTS SPENT ON TRIP, NOT JUST NIGHTS SPENT IN STATE.
[4] APPARENT INCONSISTENCY BETWEEN FIGURE FOR HOUSEHOLD TRIPS AND THAT FOR PERSON-TRIPS IS BECAUSE THE TWO KINDS OF TRIPS WERE WEIGHTED INDEPENDENTLY.

[1] INCLUDES TRIPS TO DESTINATIONS OUTSIDE THE UNITED STATES.

[2] NIGHTS SPENT IN STATE.

[3] INCLUDES TOTAL NIGHTS SPENT ON TRIP, NOT JUST NIGHTS SPENT IN STATE.

[4] APPARENT INCONSISTENCY BETWEEN FIGURE FOR HOUSEHOLD TRIPS AND THAT FOR PERSON-TRIPS IS BECAUSE THE TWO KINDS OF TRIPS WERE WEIGHTED INDEPENDENTLY.

[1] INCLUDES TRIPS TO DESTINATIONS OUTSIDE THE UNITED STATES.

[2] NIGHTS SPENT IN STATE.

[3] INCLUDES TOTAL NIGHTS SPENT ON TRIP, NOT JUST NIGHTS SPENT IN STATE.

[4] APPARENT INCONSISTENCY BETWEEN FIGURE FOR HOUSEHOLD TRIPS AND THAT FOR PERSON-TRIPS IS BECAUSE THE TWO KINDS OF TRIPS WERE WEIGHTED INDEPENDENTLY.

[1] INCLUDES TRIPS TO DESTINATIONS OUTSIDE THE UNITED STATES.

[2] NIGHTS SPENT IN STATE.

[3] INCLUDES TOTAL NIGHTS SPENT ON TRIP, NOT JUST NIGHTS SPENT IN STATE.

[4] APPARENT INCONSISTENCY BETWEEN FIGURE FOR HOUSEHOLD TRIPS AND THAT FOR PERSON-TRIPS IS BECAUSE THE TWO KINDS OF TRIPS WERE WEIGHTED INDEPENDENTLY.

[1] INCLUDES TRIPS TO DESTINATIONS OUTSIDE THE UNITED STATES.

[2] NIGHTS SPENT IN STATE.

[3] INCLUDES TOTAL NIGHTS SPENT ON TRIP, NOT JUST NIGHTS SPENT IN STATE.

[4] APPARENT INCONSISTENCY BETWEEN FIGURE FOR HOUSEHOLD TRIPS AND THAT FOR PERSON-TRIPS IS BECAUSE THE TWO KINDS OF TRIPS WERE WEIGHTED INDEPENDENTLY.

TABLE 29. WEST VIRGINIA--TRAVEL TO AND THROUGH THE STATE BY SELECTED HOUSEHOLD AND TRAVELER CHARACTERISTICS

[1] INCLUDES TRIPS TO DESTINATIONS OUTSIDE THE UNITED STATES.
[2] NIGHTS SPENT IN STATE.
[3] INCLUDES TOTAL NIGHTS SPENT ON TRIP, NOT JUST NIGHTS SPENT IN STATE.
[4] APPARENT INCONSISTENCY BETWEEN FIGURE FOR HOUSEHOLD TRIPS AND THAT FOR PERSON-TRIPS IS BECAUSE THE TWO KINDS OF TRIPS WERE WEIGHTED INDEPENDENTLY.

[1] INCLUDES TRIPS TO DESTINATIONS OUTSIDE THE UNITED STATES.

[2] NIGHTS SPENT IN STATE.

[3] INCLUDES TOTAL NIGHTS SPENT ON TRIP, NOT JUST NIGHTS SPENT IN STATE.

[4] APPARENT INCONSISTENCY BETWEEN FIGURE FOR HOUSEHOLD TRIPS AND THAT FOR PERSON-TRIPS IS BECAUSE THE TWO KINDS OF TRIPS WERE WEIGHTED INDEPENDENTLY.

[1] INCLUDES TRIPS TO DESTINATIONS IN THE UNITED STATES.
[2] NIGHTS SPENT IN CANADA.
[3] INCLUDES TOTAL NIGHTS SPENT ON TRIP, NOT JUST NIGHTS SPENT IN CANADA.
[4] APPARENT INCONSISTENCY BETWEEN FIGURE FOR HOUSEHOLD TRIPS AND THAT FOR PERSON-TRIPS IS BECAUSE THE TWO KINDS OF TRIPS WERE WEIGHTED INDEPENDENTLY.

[1]INCLUDES TRIPS TO DESTINATIONS IN THE UNITED STATES.
[2]NIGHTS SPENT IN MEXICO.
[3]INCLUDES TOTAL NIGHTS SPENT ON TRIP, NOT JUST NIGHTS SPENT IN MEXICO.
[4]APPARENT INCONSISTENCY BETWEEN FIGURE FOR HOUSEHOLD TRIPS AND THAT FOR PERSON-TRIPS IS BECAUSE THE TWO KINDS OF TRIPS WERE WEIGHTED INDEPENDENTLY.

[1]INCLUDES TRIPS TO DESTINATIONS OUTSIDE THE UNITED STATES.
[2]SUM OF THE FOUR QUARTERS WILL EXCEED TOTAL SHOWN IN TABLES 28 AND 29 BECAUSE HOUSEHOLDS AND PERSONS CAN TAKE TRIPS IN MORE THAN ONE QUARTER.
[3]NIGHTS SPENT IN STATE.

Appendix A. Explanation of Terms

Activities engaged in—The household member reporting the trip was asked to state what recreational activities, if any, were engaged in by any member of the household on the trip. The activities could have been engaged in by one or more household members at any time during the trip.

Area of destination and area of residence—Information on the geographic residence of the household and the area of the trip destination was classified according to the following three categories.

1. In a Standard Metropolitan Statistical Area (SMSA) of less than 1 million population.
2. In an SMSA of 1 million population or more.
3. Not in an SMSA.

The area classification pertains to the residential location of the sample household as of April 1977 (first interview of the survey) and was not changed for tabulation purposes even if the household moved during the year.

An SMSA is an integrated economic and social unit with a large population nucleus. Each SMSA consists of one or more counties meeting standards of population and metropolitan character, except in New England where towns and cities rather than counties are the basic geographic units.

The metropolitan population reflects those areas classified as SMSA's at the time of the 1970 Decennial Census and does not include any subsequent additions or changes. The classification of an SMSA by population size is based on the population counts of the SMSA from the 1970 Decennial Census.

Composition of household travel party—The household travel party was categorized into one of three groups depending on the age of all the household members who went on the trip.

1. Travel parties with no persons under 18 years old; i.e., every household member on the trip was 18 years old or older.
2. Travel parties with some persons under 18 years old; i.e., at least one household member on the trip was under 18 years old and at least one was 18 years old or older.
3. Travel parties with only persons under 18 years old; i.e., every household member on the trip was under 18 years old.

Destination of trip—The place reported by the respondent as the destination of the trip. If more than one place was visited on the same trip, the place which was the farthest point from the origin was considered the destination of the trip.

Duration of trip—This is the number of nights spent away from home on a trip and includes both nights spent at the destination and nights enroute. It is possible for a trip not to involve an overnight stay away from home; a traveler could take a trip of 100 miles or more and return home the same day.

Education of household head/person—The highest grade of school completed as of April 1977 determines the educational category of the traveler or household head. The three educational categories are:

1. Elementary or less—8 or less years of grammar school completed.
2. High school—1 or more years of high school but no years of college completed.
3. College—1 or more years of college completed.

Origin or descent of household head/person—The ethnic origin of the traveler or household head was classified into "Spanish" and "not Spanish." Persons in the survey were asked to report their origin or descent by selecting the appropriate group from a list of different ethnic origins. Persons of Spanish origin were those who indicated that their origin was Mexican, Puerto Rican, Cuban, Central or South American, or some other Spanish origin.

Family income—The total combined income for 1977 of the household head and all persons related to the head by blood, marriage, or adoption who were living in the household as of January 1978. Family income includes income from all sources, such as wages and salaries, net income from own business or own farm, social security, pensions, dividends, interest, rent, and any other money income. The income of household members not related to the head was not obtained in the survey.

Destination outside United States—Travel to and through foreign countries and dependencies outside the United States was reported, either separately or grouped, as follows:

1. Canada.
2. Mexico.
3. Other North America—Bermuda, Greenland, and Saint Pierre and Miquelon.
4. Central and South America—except Mexico, which is shown separately.
5. Caribbean
   a. Puerto Rico.
   b. U.S. Virgin Islands.
   c. Jamaica.
   d. Other Caribbean—all the other islands in the Caribbean except Bermuda, which is included in Other North America.
6. Europe
   a. Eastern Europe—Bulgaria, Czechoslovakia, German Democratic Republic, Hungary, Poland, Romania, and the U.S.S.R.
   b. Western Europe—all the other European countries not included in "Eastern Europe."

7. Oceania—Australia, New Zealand, Guam, and the other Pacific Islands not included in "Asia."
8. Africa.
9. Asia—Includes, besides the other Asian countries, Turkey, Syria, Lebanon, Iraq, Iran, Israel, Jordan, and the Arabian Penninsula States.

Household—This is the designation of the basic sampling and reporting unit for collecting travel and other information in the survey. A household consists of all persons who occupy a housing unit such as a house, apartment, or rooms that form separate living quarters.

Household composition—The household was placed into one of two categories depending on the ages of the persons in the household as of April 1977. If none of the household members were under 18 years of age, the household fell into the category "Households with no persons under 18 years old." If at least one member (or all members) of the household was under 18 years of age as of April 1977, the household's category was "Households with persons under 18 years old."

Industry of household head—Household heads who were classified as currently employed, i.e., working during the week preceding the April 1977 interview date, or with a job but temporarily absent from it during the week preceding the interview, were classified according to the type of industry in which they worked. The industry classifications used were from the 1970 Census of Population Industrial and Occupational Classification System.

1. Agriculture, forestry, and fisheries.
2. Construction and mining.
3. Durable goods manufacturing.
4. Nondurable goods manufacturing.
5. Transportation, communications, and public utilities.
6. Wholesale and retail trade.
7. Finance, insurance, and real estate.
8. Business and repair services.
9. Personal, entertainment, and recreational services.
10. Professional and related services.
11. Public administration.

All household heads who were not classified as employed were classified as "not in labor force or unemployed."

Main purpose of trip—The respondent was asked to indicate the main reason motivating the travel and without which the trip would not have been made. Trip purposes were classified according to the following categories:

1. Visit relatives or friends.
2. Business.
3. Convention.
4. Outdoor recreation.
5. Entertainment.
6. Sightseeing.
7. Personal or family affairs or medical.
8. Shopping.
9. Other.

The main reason for the trip as reported by the respondent was ascribed to each household member who went on the trip.

Major means of transportation—Each trip was classified according to the primary means of transportation used to make the trip (exclusive of local movements by such means as buses, taxis, and limousines for traveling to and from primary transportation terminals). Information on means of travel was reported for each trip in one of the following categories: (1) Auto without camping equipment, (2) truck without camping equipment, (3) auto with camping equipment, (4) truck with camping equipment or self-contained vehicle, (5) bus, (6) train, (7) airplane, (8) ship or boat, and (9) other transportation.

Respondents were asked to report separately the major means of transportation used for going and for returning on the trip. If a different means was used for going and returning, the trip was tabulated for this report in the category "Different means going and returning".

Number of trip—In this report, the data on the number of persons on a trip reflect only those persons in the sample household who went on the trip; the data do not include persons from other households who also may have accompanied members of the sample household on the trip. To have included persons from other households would have been to overestimate the amount of travel, since each household in the country had a chance of being selected in the sample and of reporting their trips along with the number of persons who went on them.

Occupation of household head—Household heads were classified as "employed" or "not in labor force or unemployed." Employed persons, i.e., persons who were working during the week preceding the April 1977 interview date or with a job but temporarily absent from it during the week preceding the interview, were classified by occupation according to the 1970 Census of Population Industrial and Occupational Classification System.

1. White-collar workers
   a. Professional and technical.
   b. Managers and administrators (except farm).
   c. Sales.
   d. Clerical.
2. Blue-collar workers.
   a. Craft and kindred.
   b. Operatives.
   c. Nonfarm laborers.
3. Service workers.
4. Farm workers.

Overnight accommodations—Information on the types of lodgings used by travelers while on a trip was collected in the survey. The following categories are used to report the data collected:

1. With relatives or friends.
2. In rental accommodations—all types of commercial rental establishments except campgrounds.
3. In own cabin, campsite, or vacation home.

4. Camping in public or commercial campground—campground space owned or operated by a government agency or campground space operated by a nongovernment organization.
5. In other accommodations—all other types of lodging such as accommodations on ships or boats, and nights spent traveling without using overnight lodging.

Information on types of lodgings was gathered for each trip by the State or country in which the nights were spent, except for nights spent on a cruise or while traveling enroute.

Person-miles—This is an estimate of the aggregate distances traveled by all persons who took a trip and is based on the route miles traveled on the trip. For example, if three persons took a trip that involved 220 route miles, the travel would be counted as 660 person-miles.

Person-nights—This is the number of nights spent by each person on a trip. For example, if two persons took a trip that involved being away from home for 5 nights, a total of 10 person-nights would be counted for that trip.

Prior planning time—If the trip was a vacation or weekend trip, the respondent was asked to indicate how long before the trip began was the destination decided upon and what month and day the respondent would be leaving.

Region of residence—This refers to the place of residence of the members of the household as of April 1977.

Respondent—This is the person who reported the information about the trip. Survey procedures specified that persons 14 years old or older be interviewed personally about any trips they took during the reference period. Household trips taken by more than one household member were reported by the first member interviewed who went on the trip. Trips taken by household members under 14 years of age were reported by a knowledgeable adult household member. Procedures were established to ensure that a household trip taken by more than one household member was reported only once with an indication of each of the household members on the trip.

Round trip distance—The round trip distance is based on the route miles traveled from the residence of the household at the time of the trip to the destination and back. Route miles are twice the calculated one-way straight-line miles from origin to destination, adjusted by a circuity factor (to reflect the circuitous nature of actual travel routes) dependent on the means of transportation used. Bus and rail routes tend to be about 25 percent longer than straight-line routes. Air miles, as flown, tend to be about 15 percent longer than straight-line miles. Automobile and truck trips were assigned a circuity factor based on the State of origin and the State of destination of the trip. The factor ranged from 1.01 to 1.81.

In addition to the circuity factor adjustment, the estimated mileage on auto/truck trips was adjusted upward by 25 percent to account for a general tendency among travelers to take "side trips" and to travel along interesting or fastest routes, rather than on the shortest ones. After applying the circuity and side trip factors to the estimates of mileage on auto/truck trips, the estimates were reduced by 14 percent. This adjustment was made based on the results of a study which compared the mileage derived after applying the circuity and side trip factors with mileage obtained by clerically measuring the actual trip length using the routes traveled and side trip information provided by respondents. The supplemental information was collected from a representative sample of the trips reported in the first and fourth quarters of the survey.

In general, mileage was not calculated for trips to destinations outside the United States. Mileage to selected Canadian and Mexican border cities, however, was calculated to ensure that the trip was 100 miles or more one-way.

Selected expenditures—Information was collected on three types of expenditures travelers may have had: Lodgings, public transportation, and package tour costs. The published data also include the total costs reported.

Lodging and public transportation expenditures—the respondent was asked to report the total lodging expenditures incurred during the trip. If at least one part of the trip (either going or returning) was made by common carrier (bus, train, airplane, or ship or boat), the respondent was also asked to report the transportation costs of the portion of the trip taken by common carrier. If the trip was a package or all expense trip and lodging or transportation was included in the cost of the package, the respondent was not asked to report the lodging or transportation expenses, even though there may have been additional lodging or transportation expenditures. Estimates of transportation costs of trips taken by privately owned vehicles were not collected in the survey.

Package or all expense trip costs—Respondents were asked the cost of package tours and whether food, lodging, transportation, and other expenses, were included in the cost. As indicated in table 9 of this report, many respondents considered business trips for their employers as all expense trips, but they were unable to report the costs because the employers made the arrangements and paid for the trip.

The "total costs reported" categories published in tables 9 and 12 are the sum of the costs for the package tour or all expense trip, lodging expenditures, and public transportation expenditures for a trip. If the respondent was unable to report the expenditures for one or more of these items, the trip was counted in the "Some or all costs not reported" line. If there was no cost for a particular item, 0 was assigned to that item and the expenditures for the other items were summed and shown as the total costs for the trip.

Traveling households—This term is used mainly to indicate the dispersion of travel among households. If one or more trips were taken by any member of a household during the year, the household was classified as a traveling household for the year. The same principal was applied in determining traveling households for each of the four quarters. If a household took one or

more trips in each of the four quarters, it would be counted as a traveling household for each quarter. For that reason, the sum of the traveling households in each quarter exceeds the number shown for the year.

Travel regions—These regions differ from the four geographic regions and nine geographic divisions customarily used to present census data. The travel regions used to present statistics in this report were first used in the 1972 survey report although they had different names then. The travel region classification follows an industry standard advanced by the U.S. Travel Service (USTS) and the Discover America Travel Organization (DATO). The only difference is that Hawaii is in the NTS's Far West Region instead of the USTS/DATO Island grouping. Since "destination" information is so important to the tourism/travel industry, the travel regions seem to represent the most natural travel-serving geographic grouping of States within the constraints of the national sample design. (A map of the travel regions is on page XXVII.)

Travel to and through States—In the 1972 survey, the "visited State" concept was introduced. A "visited State" was the State of destination or another State enroute in which one or more nights were spent. The 1977 survey expanded this concept for auto/truck trips to include States traveled through while enroute in which no nights were spent. This includes the State of origin for trips to destinations in other States. A particular State is represented only once for each trip and was counted in the following priority order: State of destination, State in which one or more nights were spent, or State in which the household passed through on an auto/truck trip without spending a night.

Traveler—The term is used to refer to a person who took one or more trips during the reference period. If the person took one or more trips during the year, the person was counted as a traveler for the year. The same principal was applied to determine travelers for each of the four quarters. If a person took one or more trips in each of the four quarters, the person was counted as a traveler for each quarter. For that reason, the sum of the traveling persons for the four quarters of the year exceeds the number shown for the year.

In the 1963 NTS report, the term "traveler" referred to a person on a trip or a "person-trip". The term was generally avoided in the 1967 and 1972 reports because of the confusion between the definition of the term as used in the 1963 report and the more common use of the term as reflected in this report. The 1967 and 1972 reports used the phrase "number of different persons who take trips" to identify "travelers".

Trip—A trip is defined as "each time a person goes to a place at least 100 miles away from home and returns". This definition was first used in the 1972 survey. The 1963 and 1967 surveys defined a trip as "each time a person goes to a place at least 100 miles away from home in 1 day or is out-of-town 1 or more nights." The 1972 and 1977 trip definition omits all travel under 100 miles regardless of whether 1 or more nights were spent "out-of-town."

The following types of trips were specifically excluded from the 1977 survey:

1. Trips taken by a person acting as a member of an operating crew of a train, bus, truck, plane, or ship.
2. Trips taken by students between home (their place of residence at the time of the trip) and school.
3. Trips taken by members of the military service while on active duty.
4. Trips taken in commuting to and from work.

Respondents were asked to report trips of 75 miles or more as a means of reducing possible failure in reporting trips of 100 miles or more due to a misconception by the respondent of the actual miles traveled. Trips subsequently calculated to be less than 100 miles were excluded from the estimates.

A household trip refers to a trip in which one or more members of a household traveled together. A person-trip refers to a trip taken by an individual. For example, if three persons from the same household go together on a trip, the trip is counted as one household trip and three person-trips. If one person goes alone on two trips, the trip is counted as two household trips and two person-trips.

Use of a travel agent—Consulting a travel agent in preparation for a trip includes any services utilized, ranging from a simple request for information regarding the trip to the complete planning and arrangements for transportation, lodgings, and other traveler requirements.

Vacation or other trip—Vacation is considered to be an occasion when trips are often taken, but is not considered to be a purpose for travel in this survey. Respondents were asked whether or not the specific trip taken was considered as a vacation trip. Additionally, they were asked the main purpose of all trips reported regardless of whether the trips were vacation trips.

Weekend or other trip—Each trip was classified as a weekend (or long weekend) trip or as not a weekend trip. A long weekend trip is a 3- or 4-day trip which includes both Saturday and Sunday.

APPENDIX B. Survey Form

Form Approved; O.M.B. No. 41-R2947

FORM NTS-1A (12-20-76) — U.S. DEPARTMENT OF COMMERCE, BUREAU OF THE CENSUS

QUESTIONNAIRE – INITIAL INTERVIEW
NATIONAL TRAVEL SURVEY
1977 CENSUS OF TRANSPORTATION

NOTICE – Your report to the Census Bureau is confidential by law (title 13, U.S. Code). It may be seen only by sworn Census employees and may be used only for statistical purposes.

		HEAD												

2. TENURE (CC 7)
1 Owned or being bought
2 Rented for cash
3 Occupied without payment of cash rent

3. OCCUPATION AND INDUSTRY OF HEAD OF HOUSEHOLD

a. What was head doing most of last week? (CC 22a)
1 Working . . . . . } Skip to 3d
2 With a job but not at work } Skip to 3d
3 Looking for work
4 Keeping house
5 Going to school
6 Unable to work – Skip to item 4
7 Retired
8 Other – Specify

b. Did head do any work at all last week, not counting work around the house? (CC 22b)
1 Yes
2 No

c. Did head have a job or business from which he/she was temporarily absent or on layoff last week? (CC 22c)
1 Yes
2 No

d. For whom did head work? (CC 22d)

e. What kind of business or industry is this? (CC 22e)

f. What kind of work does head do? (CC 22f)

g. What were his/her most important activities or duties? (CC 22g)

h. What class of worker is head? (CC 22h)
1 An employee of a PRIVATE company, business, or individual for wages, salary, or commissions?
2 A GOVERNMENT employee (Federal, State, county, or local)?
SELF-EMPLOYED in OWN business, professional practice or farm?
(Mark "No," for farmers without asking)
Is it incorporated?
3 Yes
4 No
5 Working WITHOUT PAY in family business or farm?

4. FAMILY INCOME [illegible]
1 Under $2,000
2 $ 2,000 to $ 2,999
3 3,000 to 3,999
4 4,000 to 4,999
5 5,000 to 5,999
6 6,000 to 7,499
7 7,500 to 9,999
8 10,000 to 11,999
9 12,000 to 14,999
10 15,000 to 19,999
11 20,000 to 24,999
12 25,000 to 34,999
13 35,000 to 49,999
14 50,000 to 99,999
15 100,000 and over

Section III – TRIPS

Line number of household member reporting trip: _____

TRIP 1

7. Transcribe city or place and State or foreign country.
City or place
State or foreign country

8. Transcribe month trip ended
Month of _____ 197____

9. Were you living at your present address at the time this trip to . . . was taken?
1 ☐ Yes
2 ☐ No – In what city or place, and State were you living?
City or place
State

10a. Including yourself, which persons living here went on this trip?
(List respondent first)

Line No.	Household Members

b. Did anyone else go with you on the trip?
1 ☐ Yes – How many? _____
2 ☐ No – *Skip to item 11a*

c. Was this person a member (Were any of these persons members) of YOUR household at the time the trip was taken?
NOTE: Persons could have been household members at respondent's present OR previous address at the time the trip was taken
1 ☐ Yes – How many? _____
2 ☐ No – *Skip to item 11a*

If one person in item 10c enter "1" in 10d without asking.
d. In how many different households are these (number in 10c) persons now living?
_____ household(s)

11a. Was this a vacation trip?
1 ☐ Yes
2 ☐ No

b. Was this a weekend (or long weekend) trip?
1 ☐ Yes
2 ☐ No

(Show Flashcard B in NTS-6, page 6)
12a. What was the reason for this trip?
Any other reason?
(Mark ALL that apply)

11 ☐ Visit relatives or friends
12 ☐ Business
13 ☐ Convention
14 ☐ Outdoor recreation
15 ☐ Entertainment
16 ☐ Sightseeing
17 ☐ Personal or family affairs
18 ☐ Shopping
19 ☐ Medical
20 ☐ Other – *Specify* _____

(Do not ask if only one reason was marked in 12a)
b. What reason best describes the main purpose for the trip?
(Mark only ONE box)

11 ☐ Visit relatives or friends
12 ☐ Business
13 ☐ Convention
14 ☐ Outdoor recreation
15 ☐ Entertainment
16 ☐ Sightseeing
17 ☐ Personal or family affairs
18 ☐ Shopping
19 ☐ Medical
20 ☐ Other – *Specify* _____

(Show Flashcard C in NTS-6, page 7)
13. During your trip to . . ., which of the following activities did any member of your household engage in?
(Mark ALL that apply)

11 ☐ Visiting museums, zoos, gardens, etc.
12 ☐ Visiting historical areas
13 ☐ Visiting scenic areas and national parks
14 ☐ Visiting fairs, carnivals amusement or theme parks
15 ☐ Attending concerts, plays, movies, etc.
16 ☐ Attending sports events
17 ☐ Picnicking
18 ☐ Camping
19 ☐ Bicycling
20 ☐ Fishing
21 ☐ Boating sailing (Include water skiing)
22 ☐ Swimming
23 ☐ Hiking walking for pleasure
24 ☐ Hunting
25 ☐ Snow skiing
26 ☐ Other ice and snow activities (ice skating, snow mobile riding, etc.)
27 ☐ Participate in outdoor games and sports (golf, tennis, etc.)
28 ☐ Other activities not mentioned – *Specify*
29 ☐ Did not engage in any

14a. What was the main means of transportation used going and returning on the trip?
(Mark only ONE box in each column)

	GOING	RETURNING
1. Auto (without camping equipment)	1 ☐	1 ☐
2. Truck (without camping equipment)	2 ☐	2 ☐
3. Auto (with camping equipment)	3 ☐	3 ☐
4. Truck (with camping equipment) or self contained vehicle	4 ☐	4 ☐
5. Bus	5 ☐	5 ☐
6. Train	6 ☐	6 ☐
7. Airplane	7 ☐	7 ☐
8. Ship or boat	8 ☐	8 ☐
9. Other transportation	9 ☐ – *Specify*	9 ☐ – *Specify*

b. During this trip did any household member rent a car at any time?
1 ☐ Yes
2 ☐ No

CHECK ITEM B
Codes 1–4 marked in item 14a
☐ Yes – Codes 1–4 marked for at least one direction of trip – *Ask item 15a*
☐ No – Codes 1–4 not marked for either direction of trip – *Skip to item 16*

15a. Was the vehicle used on the trip owned by any member of the household? (Include company cars assigned to household members)
1 ☐ Yes – *Skip to item 16*
2 ☐ No – *Ask item 15b*

b. Was the vehicle used on the trip rented or leased by any member of the household?
1 ☐ Yes
2 ☐ No

16. What was the total round trip mileage for this trip?
_____ Total number of miles

17a. How many nights were spent away from home during this trip?
_____ Total number of nights OR
0 ☐ None – *Skip to Check Item C*

b. How many nights were spent at your destination?
_____ Total number of nights OR
0 ☐ None

18a. Please tell me the names of each State or foreign country stayed in overnight.
b. When you stayed in . . . , how many nights were spent there and in what type of lodging?
(The total number should be the same as the entry in item 17a.)

State or foreign country	CENSUS USE ONLY	Total nights spent	Type of lodging: Friends or relatives 1	Rental accommodations 2	Own cabin, campsite, vacation home 3	Camping in public (Gov't.) campground 4	Camping in commercial campground 5	Other 6

(Ask only if there is an entry of 2 or more nights for a particular State in item 18b)
c. Excluding . . . (Read destination in item 7), were there any places (cities or towns) on this trip where you spent two or more consecutive nights? (Exclude foreign countries)
1 ☐ Yes – *Continue with item 18d*
2 ☐ No – *Skip to Check Item C*

d. Please tell me the names of these places in the order you stayed there.
(If additional space needed, use Remarks)

	City or place
	State
	City or place
	State
	City or place
	State
	City or place
	State

CHECK ITEM C
Codes 1–4 marked in item 14a.
☐ Yes – Codes 1–4 marked for at least one direction of trip – *Ask item 19*
☐ No – Codes 1–4 not marked for either direction of trip – *Skip to item 20a*

Section III – TRIPS

TRIP 1 – Continued

19. *(SHOW MAP)* Please tell me the States which you traveled through on this trip without spending the night. (Include State of origin.)
(If additional space needed use Remarks)

20a. Was any part of the expense for this trip paid for as part of a package tour or an all expense trip?
1 ☐ Yes
2 ☐ No – *Skip to Check Item D*

b. What was the cost for the package tour?
$ _____ . 00

c. Did this cost include –

Food?	1 ☐ Yes	2 ☐ No
Lodging?	3 ☐ Yes	4 ☐ No
Transportation?	5 ☐ Yes	6 ☐ No
Anything else?	7 ☐ Yes	8 ☐ No

CHECK ITEM D
Codes 5–8 marked in item 14a.
☐ Yes – Codes 5–8 marked for at least one direction of trip – *Ask item 21 for that direction or directions*
☐ No – Codes 5–8 not marked for either direction of trip – *Skip to Item 22*

21. *(Do not ask if "Yes," to transportation in 20c.)* What was the cost of the transportation for the travel to and/or from your destination?
$ _____ . 00 OR
o ☐ None

22. *(Do not ask if "Yes," to lodging in 20c)* What was the cost for lodging (hotels, motels, etc.) during this trip?
$ _____ . 00 OR
o ☐ None

CHECK ITEM E
"Yes," marked in 11a OR 11b (vacation or weekend trip).
☐ Yes – *Ask item 23*
☐ No – *Skip to item 24*

23. How many months before you took this trip did you know where you were going and when?
1 ☐ Less than one month
2 ☐ 1 up to 3 months
3 ☐ 3 up to 5 months
4 ☐ 5 up to 7 months
5 ☐ 7 up to 12 months
6 ☐ 12 months and over
7 ☐ Don't know

24. Did you use the services of a travel agent for this trip?
1 ☐ Yes
2 ☐ No

25. How many other identical trips were taken (where items 7 and 9–22 are the same) since January 1, 1977?

Number of trips	Ending in month of
_____	_____
_____	_____
_____	_____

o ☐ None

CHECK ITEM F
Codes 5–8 marked in item 14a.
☐ Yes – Codes 5–8 marked for at least one direction of trip – *Ask item 26*
☐ No – *Skip to Check Item G*

26. You told me that you took this trip by . . . (Read mode(s) listed in item 14a) Did you use any other means of transportation to travel 75 miles or more to get from one point to another?
1 ☐ Yes – *Continue with item 27a*
2 ☐ No – *Skip to Check Item G*

	SIDETRIP 1	SIDETRIP 2
27a. Please tell me the city or place and State from which you began this travel. (Exclude foreign countries)	City or place State	City or place State
b. Please tell me the city or place and State to which you traveled. (Exclude foreign countries)	City or place State	City or place State
c. What means of transportation was used for this travel?	Mode – *(Enter code)*	Mode – *(Enter code)*
Show Flashcard B in NTS-6, page 6 **d.** What reason best describes the main purpose for this travel? *(Enter only one code)*	Purpose – *(Enter code)*	Purpose – *(Enter code)*
e. Did you return to your place of origin?	1 ☐ Yes 2 ☐ No	1 ☐ Yes 2 ☐ No

28. Did you make any other such trips?
Yes – *Repeat item 27a–e.*
No – *Go to Check Item G*

CHECK ITEM G
Has a trip page been completed for all trips reported by this household member?
☐ Yes – *Continue with NTS-1 proxy interviews. If no proxy interviews, continue with NTS-2 or NTS-1C questionnaire. If no NTS-2 or NTS-1C questionnaire for this enumeration period, interview next household member. If last household member,* ***END INTERVIEW.***
☐ No – *Continue with item 7 on next trip page*

Remarks

APPENDIX C. Public Use Tapes

In addition to the data presented in this report, public use computer tapes containing much of the information collected in the 1977 National Travel Survey have been developed and are available for purchase. The tapes will provide information for each interviewed household included in the survey and on the trips the household took during the year. Certain information, such as names of respondents and selected geographic detail on the residence of the households, has been suppressed to ensure the confidentiality of the sample households.

CONTENTS

The tapes consists of two types of records, each 1,740 characters long. One type is the household record and contains information about each interviewed household in the sample. The second type of record is the trip record and contains all the information recorded in the survey on each trip the household reported. Each household record has a unique identification code. Each trip record also has a code which identifies the corresponding household so that the household record and the associated trip records can be related. The contents of each type of record follows:

Household Record

1. Tenure (own or rent).
2. State of residence.
3. SMSA of residence (30 SMSA's).
4. Labor force status of head.
5. Occupation and industry of head.
6. Family income.
7. Expansion (weighting) factor for household.
8. Number of trips taken.
9. Number of household members.
10. For each household member
    a. Relationship to head.
    b. Marital status.
    c. Sex.
    d. Race.
    e. Age.
    f. Origin or descent.
    g. Highest grade of school attended, grade completed.
    h. Member, or not, of Armed Forces.
    i. Expansion (weighting) factor for person

Trip Record

1. Trip number.
2. Month and year trip ended.
3. State of trip origin.
4. SMSA of trip origin (30) SMSA's).
5. State or country of trip destination.
6. SMSA of trip destination (52 SMSA's).
7. PICADAD round trip mileage.
8. Vacation - not vacation trip.
9. Weekend - not weekend trip.
10. Reasons for trip.
11. Main reason for trip.
12. Activities engaged in on trip.
13. Means of transportation, going and returning.
14. Use of rental car.
15. Use of household vehicle.
16. Respondent's estimate of round trip mileage.
17. Nights spent away from home.
18. Nights spent at destination.
19. Trip was/was not part of package tour.
20. Package included/did not include; food, lodging, transportation, other expenses.
21. Cost of package tour.
22. Cost of transportation.
23. Cost of lodging.
24. Prior planning time.
25. Use of a travel agent.
26. Expansion (weighting) factor for household trip.
27. For each place, other than destination, in which household spent 2 or more consecutive nights (item 18d on questionnaire).
    a. State.
    b. SMSA.
28. For each place visited by the household in which a different means of transportation was used (item 27a-e on questionnaire).
    a. State of origin.
    b. SMSA of origin.
    c. State of destination.
    d. SMSA of destination.
    e. Means of transportation used.
    f. Main purpose of trip.
    g. Returned/did not return to origin.
29. States passed through without spending a night (auto/truck trips only).
30. Number of nights spent, by type of lodging accommodations, by State or country.
31. For each household member on the trip:
    a. Relationship to the head.
    b. Marital status.
    c. Sex.
    d. Race.
    e. Age.
    f. Origin or descent.
    g. Highest grade of school attended, grade completed.
    h. Member, or not, of Armed Forces.
    i. Expansion (weighting) factor for person's trip.

ORDERING TAPES

Industry-compatible copies of these tapes may be ordered through the Data User Services Division, Bureau of the Census, Washington, D.C., 20233. Inquiries about the contents and use of the tapes should be directed to the Chief, Demographic Surveys Division, Bureau of the Census, Washington, D.C. 20233.

PUBLICATION PROGRAM

1977 CENSUS OF TRANSPORTATION

Publications of the 1977 Census of Transportation, containing data on personal travel, the characteristics and use of trucks, the shipment of commodities by manufacturers, and financial and operating characteristics of nonregulated motor carriers and public warehousing are described below. Publications order forms for the specific reports may be obtained from any Department of Commerce district office or from Customer Services Branch, Data User Services Division, Bureau of the Census, Washington, D.C. 20233.

Final detailed statistics are issued in separate paperbound reports. These reports subsequently are assembled and reissued in clothbound volumes.

Final Reports

Truck Inventory and Use Survey—52 reports (TC77-T-1 to -52)

This series includes a U.S. summary and a separate report for each State and the District of Columbia. Data cover the characteristics and uses of the Nation's private and commercial truck resources, the number of vehicles, and selected truck inventory characteristics.

National Travel Survey—2 reports (TC77-N-1 and -2)

This survey results in a preliminary first-quarter report covering travel ending January through March 1977, and a final report covering travel for each of the four quarters and the entire year 1977. Data cover number of persons taking trips, number of trips taken, person-trips, person-miles, person-nights, and accommodations used, by such travel characteristics as means of transport, purpose of trip, duration, distance, size of party, vacation or weekend, and travel region of origin and destination. Also presented are data by such socioeconomic characteristics as residence, occupation, education, and family income level.

The first report presents data on travel for the Nation, while the final report includes information on travel for the eight travel regions, States, and selected foreign areas, as well as National totals.

Commodity Transportation Survey—9 reports (TC77-CA-1 to -8 and TC77-CI-1)

Data on the shipments of commodities by manufacturers are presented in two series of reports.

The geographic area reports (TC77-CA-1 to -8) give the flow of commodities from manufacturing plants located in each of the 49 production areas (each production area consists of one or a cluster of SMSA's) and selected States. Data are also shown for tons and ton-miles of commodities shipped classified by means of transport, length of haul, and areas of destination of shipments.

An industry report (TC77-CI-1) shows commodity flows classified by the industry code of the manufacturing shipper.

Nonregulated Motor Carriers and Public Warehousing Survey—1 report (TC77-B)

The data for this survey are published in one report. Establishment statistics are presented by kind of business by State, employment size, and revenue size.

Final Report Volumes

- Volume I. National Travel Survey—Data previously issued in series TC77-N.
- Volume II. Truck Inventory and Use Survey—Data previously issued in series TC77-T.
- Volume III. Commodity Transportation Survey—Data previously issued in series TC77-CA and TC77-CI.

Data from the Nonregulated Motor Carriers and Public Warehousing Survey (TC77-B) are not reissued in clothbound form.

Microfiche

All published data are also available on microfiche.

A special microfiche series (TC77-CC-1(M) to -14(M) presents data from the 1977 Commodity Transportation Survey with primary emphasis on commodity groupings. Data are available showing tons, ton-miles, and value of shipments, by means of transport, length of haul, origin, and destination. These data are available on microfiche only.

Computer Tapes

Most tapes from the census of transportation are different from the computer tapes for the other economic censuses in that they contain microdata rather than summary data. The term microdata refers to the unaggregated records for the individual responses. The records are modified to avoid the possibility of identifying individual households or establishments.

The tapes for the Truck Inventory and Use Survey contain microdata information for each truck in the sample, except that a few items of information have been deleted in order not to reveal the identity of individual operations.

The microdata files for the National Travel Survey provide a complete record for each trip reported in the survey. Confidentiality of individual respondents is ensured by the elimination of names from all records and of trip origin detail below the State or large SMSA level. These tapes generally identify the States or large SMSA's of destination, and States in which nights were spent.

The tapes for the Commodity Transportation Survey consist of two files. The first file contains shipment record summaries of commodity flow to and from 49 production areas. The other contains shipment record summaries from originating State to destination State.

No public-use tape is planned for the Nonregulated Motor Carriers and Public Warehousing Survey.

OTHER ECONOMIC CENSUSES REPORTS

Data on retail trade, wholesale trade, service industries, construction industries, manufactures, mineral industries, enterprise statistics, minority-owned businesses, and women-owned businesses also are issued as part of the 1977 Economic Censuses. A separate series of reports covers the censuses of outlying areas—Puerto Rico, Virgin Islands of the United States, and Guam. Separate announcements describing these reports are available free of charge from Customer Services Branch, Data User Services Division, Bureau of the Census, Washingon, D.C. 20233.
